General Information on Consolidated Operating Performance

The Japanese economy continues to recover thanks to increasing exports, expanding equipment investment by private enterprise and steady growth in personal consumption spurred by higher earnings and rising employment.

In the steelmaking and steel fabrication sector, whereas domestic demand for steel in civil engineering area still shows a decreasing trend, demand in the building construction area is firm due to high levels of activity in housing and plant construction. Manufacturing industries, such as automobiles, shipbuilding and industrial machinery, continue to generate strong demand due to thriving demand in both of domestic and overseas markets.

In steel product exports, demand remains steady in the manufacturing industries of East Asia which serve as Nippon Steel’s main market. Supply and demand in the export market remains tight for high-grade steel products but is loosening for commodity-grade steel products due to increased production caused by expanding production capacity in China. As a result, a bipolar trend in demand is becoming apparent.

Given these circumstances, Nippon Steel views the maintenance and improvement of steel product sales prices as its first priority. In addition, in an increasingly bipolar demand environment for high-grade and commodity-grade steel products, Nippon Steel is exerting maximum effort to implement production and shipping operations that will steadily respond to firm demand for high-grade steel products. At the same time, the company is working to establish a sound supply and demand situation in the field of commodity-grade products by reducing production—mainly of those for export and steel sheets for domestic market.

In the engineering and construction sector, while a severe operating environment persists in some fields due to reduced public works projects and other factors, Nippon Steel has secured a steady stream of orders supported mainly by robust overseas demand. Further, the company is doing its utmost to improve profitability through cost cutting. In the urban development sector, operations centered on condominium sales in the metropolitan Tokyo area are steady, with achievements running nearly as planned. In the chemicals and nonferrous materials sector, in spite of chemicals market softening that has adversely affected operating results in the chemicals sector, operations in the sector are progressing nearly as planned, and demand remains steady in IT- and digital-related fields, the main markets in the new materials sector. As a result, operating results in the chemicals and nonferrous materials sector as a whole are firm. In the system solutions sector, operations are progressing steadily as planned, supported by steady receipts of inquiries and orders mainly from manufacturing and logistics industries.

Pursuant to the foregoing, settlement of accounts for the period up to the third quarter of fiscal 2005 (April 1, 2005 to December 31, 2005) shows the following consolidated operating results: sales of ¥2,816.1 billion, operating profits of ¥424.4 billion, ordinary profits of ¥416.7 billion, and a net income of ¥270.1 billion.
