## Consolidated Operating Results

While it will be important to monitor closely the impact of the credit contraction in global financial markets sparked by the U.S. subprime loan problem, the global economy as a whole continues to expand as emerging countries, led by Brazil, Russia, India, and China (the BRICs), continue to report GDP growth and investment in the fields of energy and infrastructure remains active.

In the domestic steel market, production in the field of construction materials has been pared back because of the steep decline in construction activity since the amended building code took effect. Even so, demand continues to be robust, especially from the automotive, shipbuilding, machinery, and other manufacturing industries due to expanding demand overseas, and the overall supply/demand picture in Japan remains tight. In the overseas steel market, while the economic slowdown in the United States has exposed some weakness in real demand, there is solid demand expansion in other regions arising from economic growth, and Chinese steel exports have fallen off due to export restrictions the government has put into place. The overall trend is consequently firm, and buoyed by these conditions, domestic crude steel production volume in 2007 exceeded 120 million metric tons, reaching a new peak.

While supply/demand conditions are strong, cost increases have been greater than we anticipated as market prices for raw materials and fuels, especially steel scrap, ocean freight, and crude oil, have soared. While we are still striving to reduce costs as much as possible through in-house initiatives, we will continue to seek price increases from our customers by asking for their understanding in view of the higher market prices for raw materials and fuel.

The engineering and construction business, buttressed by an order backlog that approaches a record high, is working to improve its profitability through better earnings on projects as well as revenue expansion. Despite changes in the condominium business environment, the performance of the urban development business is trending in line with the Company plan. At the chemicals business, higher prices for naphtha have impacted chemical products, and fiercer competition among companies has impacted electronic materials, but sales of coal chemicals remain brisk, supported by firm and demand. As a result, the performance of the chemicals business as a whole is roughly even with the Company plan. At the new materials business, the adjustment phase in the electronics industry, a key market for this business, is dragging on longer than anticipated, and we are doing our utmost to improve earnings through cost reduction initiatives. The system solutions business is faring well, driven by business solutions, including projects for the financial industry.

As a result of the above, in the first quarter through the third quarter (April 1, 2007, to December 31, 2007) of the fiscal year ending March 31, 2008, consolidated net sales
came to $¥ 3,506.1$ billion, consolidated operating profit to $¥ 408.1$ billion, consolidated ordinary profit to $¥ 434.6$ billion, and consolidated net income to $¥ 263.0$ billion.

Consolidated Assets and Liabilities
Compared with the end of March 2007, consolidated total assets came to $¥ 5,519.5$ billion at the end of December 2007, an increase of $¥ 174.5$ billion. Net assets totaled $¥ 2,485.4$ billion, boosting the ratio of shareholders' equity to total assets by 0.5 percentage point, to $35.9 \%$. Outstanding interest-bearing debt amounted to $¥ 1,412.1$ billion, a rise of $¥ 199.0$ billion compared with the level at the end of March 2007.

Other
(1) Significant changes in scope of consolidation

There were no significant changes in scope of consolidation.
(2) Adoption of concise accounting method

A concise accounting method has been adopted in part for the standard applied to corporate taxes, allowances, and other items.
(3) Changes in accounting methods from most recent consolidated fiscal year
(a) Changes in accounting policies

Attendant with amendments to the corporate tax law, from the fiscal year ending March 31, 2008, we have booked depreciation expenses for tangible fixed assets purchased since April 1, 2007, using the depreciation method stipulated in the amended corporate tax law.
(b) Additional information

Attendant with amendments to the corporate tax law, from the fiscal year ending March 31, 2008, we have applied the straight-line depreciation method for a five-year period to the residual book value of tangible fixed assets acquired on or prior to March 31, 2007, that have already been fully depreciated down to the former maximum allowable amount.

Concomitant with the adoption of (a) and (b) above, compared with the prior depreciation method, the depreciation expense is $¥ 25,277$ million higher, gross margin is $¥ 20,842$ million lower, operating profit is $¥ 21,773$ million lower, and ordinary profit and income before income taxes and minority interests are each $¥ 22,882$ million lower.
