Accelerating towards Becoming the Best Steelmaker with World-Leading Capabilities

CORPORATE PHILOSOPHY

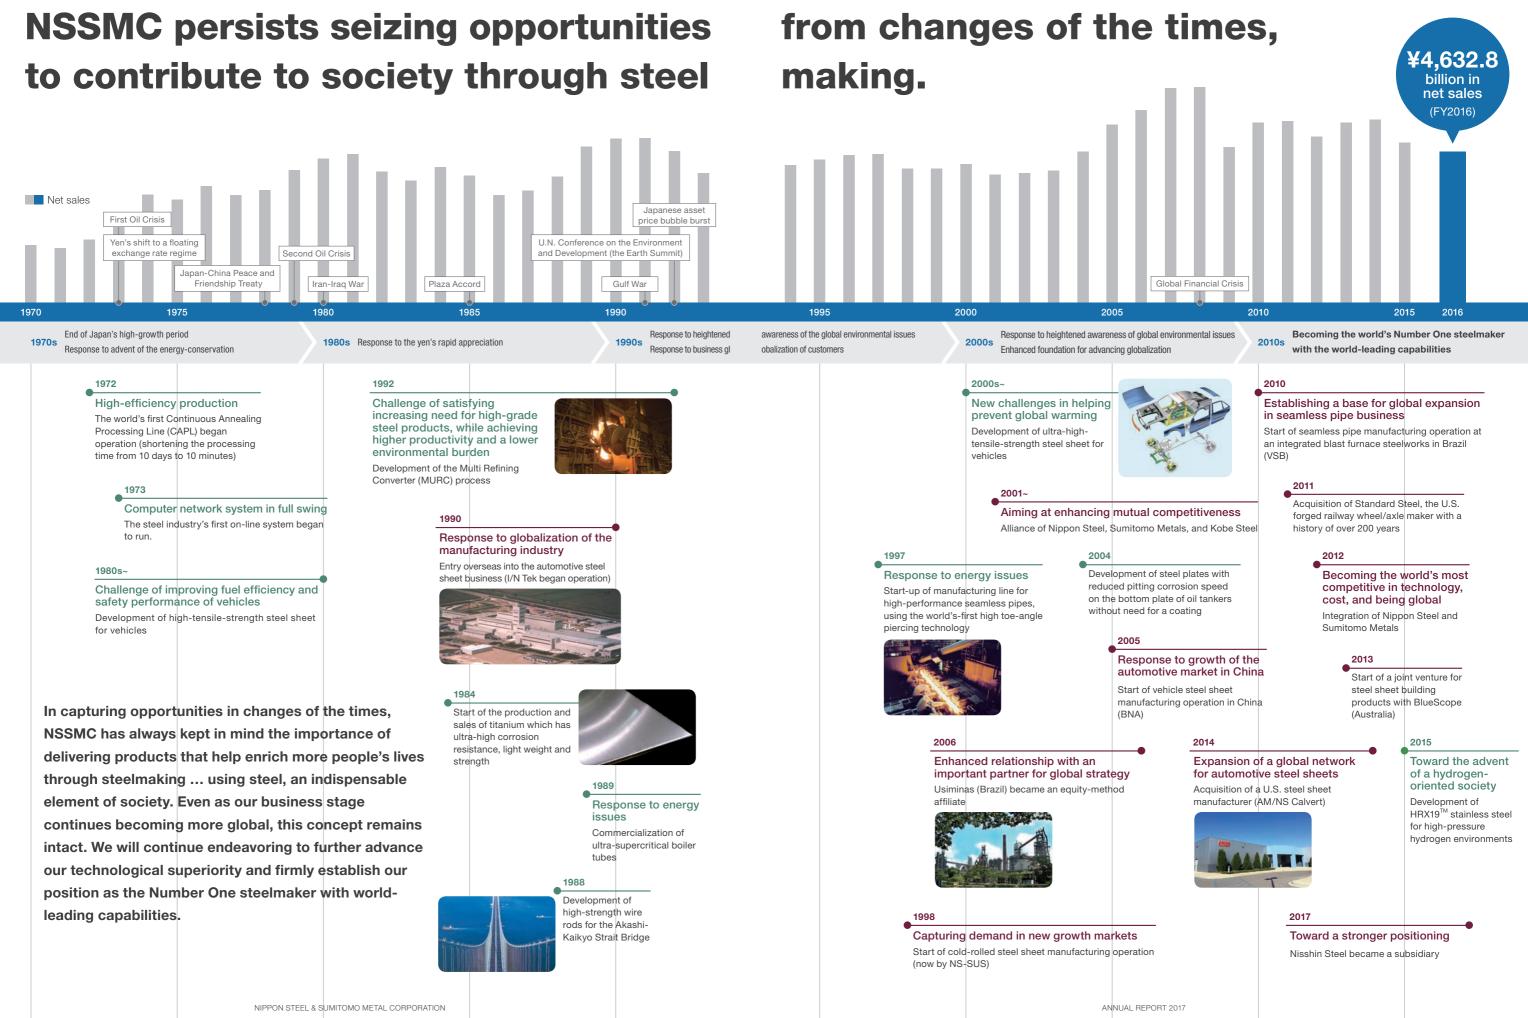

Our Values

NIPPON STEEL & SUMITOMO METAL CORPORATION GROUP WILL PURSUE WORLD-LEADING TECHNOLOGIES AND MANUFACTURING CAPABILITIES, AND CONTRIBUTE TO SOCIETY BY PROVIDING EXCELLENT PRODUCTS AND SERVICES.

Management Principles

- 1. We continue to emphasize the importance of integrity and reliability in our actions.
- 2. We provide products and services that benefit society, and grow in partnership with our customers.
- 3. We pursue world-leading technologies and manufacturing capabilities.
- 4. We continually anticipate and address future changes, innovate from within, and pursue unending progress.
- 5. We develop and bring out the best in our people to make our Group rich with energy and enthusiasm.

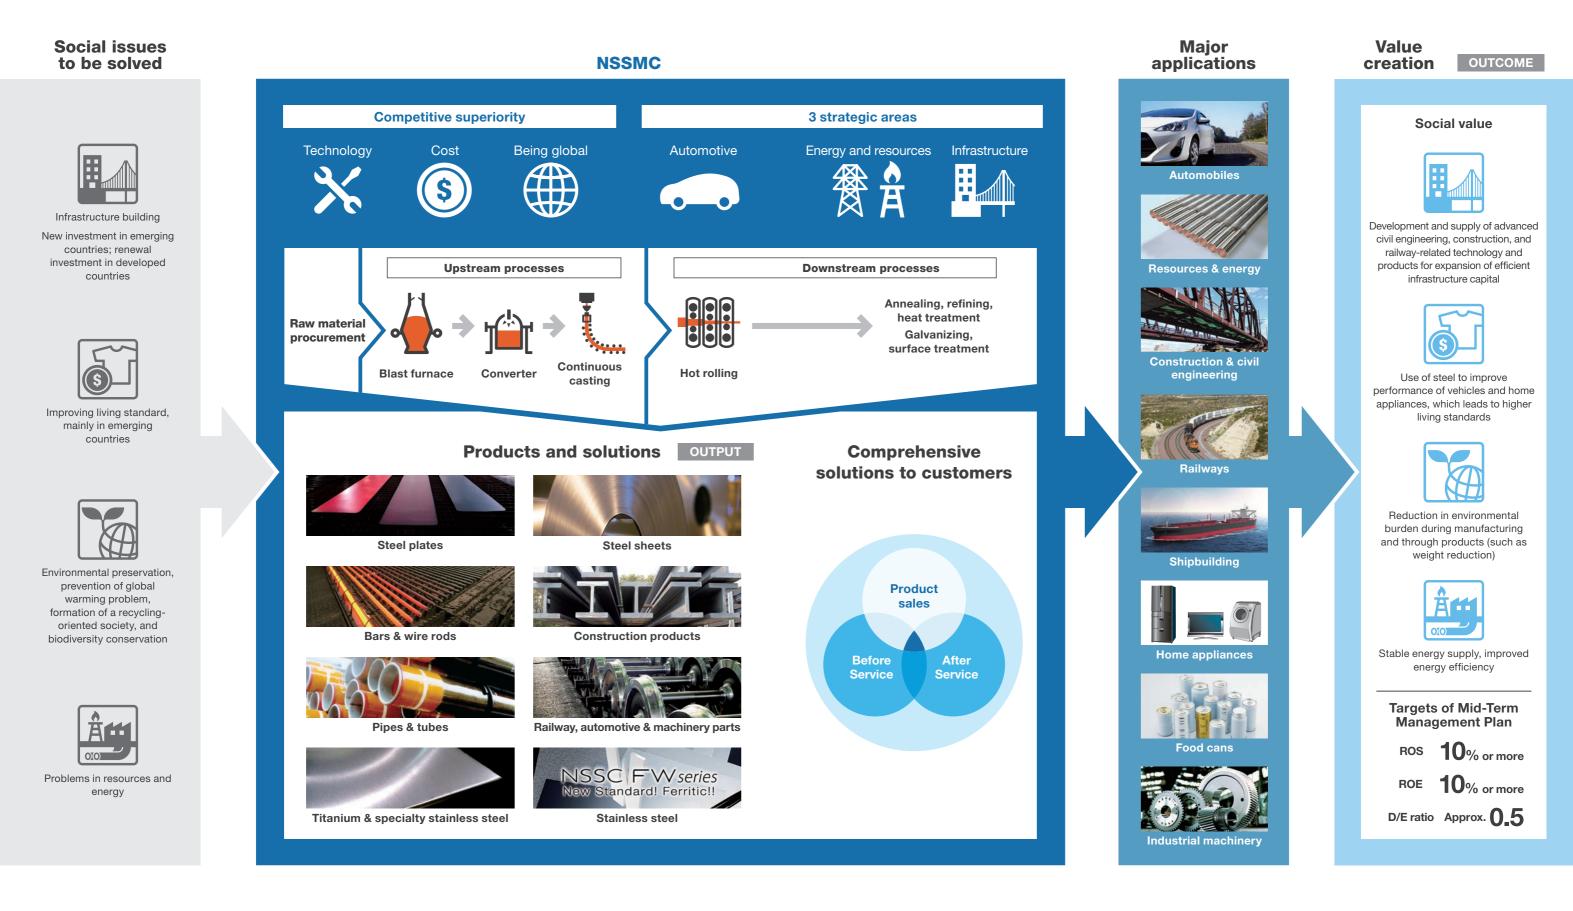

Business Model (steelmaking business)

Through its steelmaking NSSMC responds to challenges of solving issues confronting society.

We are dedicated to using our technology and manufacturing capability to contribute to the solution of various social issues: infrastructure building, improvement of living standards, climate change, problems in resources and energy, etc.

103 Investor Information

Supporting society globally through steelmaking

I am Kosei Shindo, the President of Nippon Steel & Sumitomo Metal Corporation (NSSMC).

Since its founding, NSSMC has played the important role of broadly supporting society through steelmaking. And we are now also aiming at firmly establishing our presence as the best steelmaker with world-leading capabilities and in keeping with that expanding our role to a more global scale.

We believe this will be achieved by capturing demand from a more global perspective, generating profit, and achieving growth.

We are firmly committed to achieve our objectives, by using our world-leading technologies and manufacturing capabilities.

Let me take this opportunity to discuss the strategies we have adopted for achieving objectives, issues to be addressed, and other things we have in mind.

Basic business strategies

Focus on three strategic areas of automotive, energy and resources, and infrastructure

NSSMC aims at building a global and optimal production system, based on high technological capabilities, and at globally expanding business by taking advantage of our competitiveness in products and costs. By focusing on technology, cost, and being global, our three strategic areas are automotive, energy/resources, and infrastructure-related. We intend to expand shares mainly in the high end of those markets with medium to long-term growth potential.

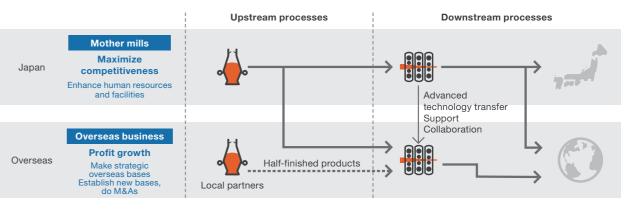

Enhance the competitiveness of domestic manufacturing bases and expand the profit of overseas bases

The current Mid-Term Management Plan, which ends in fiscal 2017, emphasizes growth of both domestic businesses and overseas businesses functioning as the two halves of the whole, as the basic strategy. This means that we seek to enhance competitiveness of domestic manufacturing steel mills as "mother mills," which are the source of our competitiveness such as through technological superiority, and to expand the profit of overseas bases by taking advantages of the strength nourished in Japan.

In Japan, to enhance cost competitiveness and technology development capability in upstream operations

Our mother mills (domestic bases) strive to improve technological capabilities for achieving greater cost competitiveness in upstream operations. Most major blast furnace steelmakers in the world depend mainly on Brazil and Australia for raw materials and are exposed to the same competitive landscape. This means that competitiveness in capital-intensive upstream processes, including blast furnaces, converters, and continuous casting, is determined by competitiveness derived from the improvement in production efficiency, rather than geographical conditions. Such cost competitiveness is enabled by technological

Enhanced domestic mother mills have supported global development

capabilities. We believe NSSMC's domestic upstream operations are highly competitive.

At present, NSSMC produces approximately 50 million tons of crude steel per year. Since the integration in 2012 of Nippon Steel and Sumitomo Metals to form NSSMC, we have consolidated facilities but have maintained production capacity by raising productivity by deploying our technological capability and at the same time have enhanced cost competitiveness. The present status of our improvement of production facilities is to complete changes that include, in particular, consolidation of 14 blast furnaces to 12, 32 converters to 28, and continuous casting facilities from 30 units to 27 from the integration in 2012 to the end of 2020.

Outside of Japan to expand downstream production capacity

Different from upstream processes, downstream process, such as steel plate rolling mills, are labor-intensive and require relatively low fixed cost. This is one of the reasons behind our accelerating a shift of production into emerging countries with potential for high market growth. From the time of our integration up to the present, we have completed consolidation into facilities that have high production efficiency by ceasing operation of 14 production lines.

Despite consolidation, our overall downstream production capacity has more than doubled from 9 million tons at the end of fiscal 2012 to 19 million tons at present, or 21 million tons if our new subsidiary Nisshin Steel's overseas production capacity is included. Going forward, we will continue to expand downstream production capacity in the overseas market with growth potential.

The business environment and what we have done

China made steady progress in its excess capacity issue, but must be monitored going forward

The present environment surrounding the global steel industry cannot be described without touching on China's excess production capacity issue. China's excess capacity is said to be as much as 400 million tons, or equivalent to about four times Japan's annual production capacity. In 2016, this excess capacity issue was brought up at the G7 and G20 meetings and a global forum was established as an international framework for solving the issue. This was followed by the Chinese government's announcement to reduce its capacity by 140 million tons in five years from 2016 to 2020. China has already disclosed reduction of 65 million tons in 2016 and 50 million tons in 2017. While it would take years for the problem to be solved completely, progress has steadily been made and should continue to be closely monitored. Historically, the same path for reduction of steel production capacity in line with maturity of the economy was taken by developed countries, including Japan. For the sake of the future steel industry, Japan's steel industry is more than willing to talk about our experiences if it helps our Chinese counterparts solve the problem.

Responding to changes in raw material prices and tackling the challenge to achieve appropriate prices that enable us to reproduce

Another big challenge for NSSMC has been to respond to fluctuation in raw material prices and to achieve appropriate margins that allow us to reproduce.

In the second half of fiscal 2016, raw material prices rose sharply and their impact on cost far exceeded the level we could absorb with our steady internal efforts. Only after and while making great efforts did we ask for customers' understanding in reflecting raw material costs in our product prices.

In addition, we are asking customers to allow us to have appropriate prices and margins for maintaining the reproduction capability. In order to steadily deliver our high-quality, high-performance steel materials, it is critical to enhance facilities and human resources, such as by responding to the issue of aging facilities, establishing

production base, and developing human resources, and establish, maintain, and enhance economic reproduction capability. Further, it is important to have R&D capability to correspond to increasingly sophisticated customer needs, and the establishment of overseas bases to supply on a global basis high-quality steel products similar to those from Japan. In seeking the understanding of our customers, we are committed to satisfying their requirements quality control, stable production, finely-tuned delivery control, product development, and other needs. At the same time, we are determined to continue making serious own efforts such as unending cost improvement and forward-looking technology development.

Toward strengthening our corporate foundations

Welcomed Nisshin Steel to our Group in Japan

The harsh business environment is not deterring us from continuing to lay the foundation for future development. In March 2017, we completed acquisition of a 51% equity stake in Nisshin Steel and welcomed Nisshin as a new member of the NSSMC Group. We are expecting to generate synergy effects of ¥20 billion or more from various factors: stopping operation of the No. 2 blast furnace in its Kure Works; alternative supply of steel slabs from NSSMC to improve operating rate; sharing best practices in operations technology, facilities, and maintenance; and reduction in procurement costs of raw materials, resources, and equipment. We will bring together our management resources, generate synergies, and ultimately enhance our competitiveness.

Continue to support our important overseas base Usiminas in Brazil to enhance competitiveness

Among our overseas businesses, in Brazil, Usinas Siderúrgicas de Minas Gerais S.A. – Usiminas ("Usiminas"), an equity method affiliate of NSSMC, made a capital increase of 1 billion reals (approximately ¥30 billion), in which NSSMC underwrote a higher portion than our equity stake. The Brazilian economy suffered from negative growth for two years in a row and the manufacturing sector, in particular the highend market sector including automobiles and shipbuilding, which is our area of strength, were in a deep slump. Usiminas suffered from a significant decline in business but has taken firm measures to improve its financial strength and profitability. After the completion of the capital increase, Usiminas promptly suspended the upstream operation of the Cubatão Steelworks and went through debt restructuring with major banks. In 2016, the economy in Brazil finally bottomed out and domestic demand in steel materials is recovering. Through price improvement mainly in Brazil, Usiminas is making tangible

improvement in earnings. According to the International Monetary Fund (IMF), Brazil is expected to return to a stable growth track of around 2% per year by around 2020. Having the best technological capability and a big presence in South America, Usiminas remains a critically important base for NSSMC's global strategy. Concerning governance of Usiminas, there is a difference in opinions among major shareholders and an important challenge is to establish a stable management team. NSSMC however is committed to solve this governance issue at an early stage and to continue to support Usiminas in terms of technology and human resources and aid the enhancing of their competitiveness.

FY2016 business results and update on the 2017 Mid-Term Management Plan

Earnings bottomed out in the first quarter and are on a recovery trend

In fiscal 2016, NSSMC recorded a decrease in sales and profit from the previous year at ¥4,632.8 billion in net sales, ¥174.5 billion in ordinary profit, and ¥130.9 billion in profit attributable to owners of the parent. This stemmed from sluggish sales of steel products for the energy sector on the back of depressed oil prices, the aforementioned surge in raw material prices, and the impact of currency exchange rates. These negative factors more than offset benefits from cost improvement measures and improvement in earnings of overseas and other group companies. Nevertheless, business has been on a recovery trend since the first quarter. Concerning dividend distribution, we paid ¥45 dividend per share and the payout ratio was 30.4%. We plan to announce earnings forecasts for fiscal 2017 at the earliest appropriate time and in the meantime, we are making efforts on cost reduction and other measures and, on the back of a recovery trend in global steel demand, we are asking customers to allow us to realize margins needed for maintaining economic reproduction. We are thus striving to improve earnings.

Challenge in achieving numerical targets of the Mid-Term Management Plan

Let me now explain the progress of the 2017 Mid-Term Management Plan in key performance indices (KPI). The business environment deteriorated more than expected, including effects of China's excess production capacity, which emerged earlier than expected. As a result, KPIs in fiscal 2016 were quite short of the targets set for the final year fiscal 2017. Specifically, return on sales (ROS) was 3.8% in fiscal 2016 (compared to the fiscal 2017 target of 10% or more), return on equity (ROE) was 4.6% (vs. the target of 10% or more), and the debt-to-equity (D/E) ratio was 0.71 (vs. the target of approximately 0.5). Nevertheless, closer examination reveals that in the second half of fiscal 2016 alone, both ROS and ROE improved significantly to 5.9% and 8.6% respectively. On a positive side, we have already significantly exceeded the target for asset compression a year ahead of the final plan year. We are also making steady progress and striving hard in cost reduction (targeting ¥150 billion or more per year in three years to fiscal 2017).

While we are far from satisfied in terms of numerical targets, we are promoting the enhancement of domestic manufacturing

bases and the accelerated expansion in overseas business earnings—the base for the current Mid-Term Management Plan, without any hesitation or deviation.

Maximize the potential of steel and maintain its advantages over other materials

Among issues that NSSMC must work on for achieving sustainable growth, I would like to present our initiatives on the advantages of steel to be maintained and expanded relative to other materials. Steel products used for automobiles are positioned as one of the most important products for NSSMC in both quality and volume. They are required to both have strength for safety and be light in weight for economy and reduction in the environmental burden created by vehicle use. While NSSMC provides automakers with high-tensile automotive steel sheets, which have high-tensile capability, light weight, and excellent formability, alternative materials to steel have also attracted attention in the recent years in response to enhanced fuel efficiency regulations in various countries and regions. They include aluminum and carbon fiber, which have lower specific weight and strength relative to steel, and multi-materials that combine steel with those materials. However, fuel efficiency in driving is not the only environmental impact of automobiles. The overall life cycle of automobiles includes factors such as the natural resources from exploration to transportation, manufacturing of materials and components, assembly, recycling of materials of used cars, and their disposal. This entire cycle needs to be evaluated. As many persons know,

such evaluation method is called Life Cycle Assessment (LCA) and that type of thinking is Life Cycle Thinking. Steel is far superior than other materials in its creation of environment burden during manufacturing and in its recycling. Steel also has a big advantage in terms of cost. High-tensile automotive steel sheets have so far realized only about 10% additional strength relative to theoretical strength and steel still has more potential to be explored. I believe that steel is such an irreplaceable material that we must maximize its potential. It is also important that we spread these advantages of steel to benefit many people.

Making concerted efforts and tackling on the environmental problems

Being engaged in steelmaking which emits CO_2 as part of its process, we must respond to environmental issues, such as global warming countermeasures, by reducing CO_2 emissions, and do so in a responsible manner. Japan's steel industry is proud to have achieved the highest energy efficiency in the world's steel industry and NSSMC, a perennial leader of the industry in Japan, is continuing to promote various measures for CO_2 emission reduction. In addition to curbing CO_2 emissions through improvement of the steelmaking process, we are contributing to reduction of CO_2 emission through our products. They include development of high-tensile-strength steel materials that contribute to reduction of vehicle body weight, as mentioned above, and development of electro-magnetic steel sheets and boiler tubes that withstand high temperature and high

pressure, to contribute to high efficiency in power generation. Through making available to the world our own developed and commercialized environmental and energy conservation technology, we are also trying our best to contribute to global environmental preservation. We are promoting these initiatives as three eco-friendly initiatives: "The way we manufacture is eco-friendly (Eco process)," "What we produce is eco-friendly (Eco products)," and "Sharing our eco-solutions (Eco solution)."

With adoption of the Paris Agreement in November 2016, Japan is working on a plan to cut greenhouse gas emissions 26% from 2013 levels by 2030, and 80% by 2050 as a longterm goal. In order to achieve such a hefty long-term goal, we have to form a global-wide strategy. From a technological perspective, it would also be impossible unless various totallydifferent innovations and breakthroughs were achieved. As one such breakthrough, NSSMC has been leading a project to develop eco-friendly innovative steelmaking processes that curb CO₂ emissions. Commissioned by the New Energy and Industrial Technology Development Organization (NEDO), this project aims at controlling CO2 emissions by partially replacing the use of coal with the use of hydrogen when iron ore is reduced to make steel. This R&D project will continue, aiming at practical application and dissemination by 2050, on the premise that the technology is established by around 2030.

Bringing together the wisdom of our people and accumulating such instances of technological innovation one by one, we are taking on challenges to overcome difficult tasks.

Thoroughly executing safety and disasterpreventive measures

In January, the plate mill on the premises of the Oita Works had a fire. We sincerely regret the great trouble, anxiety, and inconvenience caused to the people of the local community, our customers, and many other stakeholders. We estimate loss of approximately ¥30 billion in aggregate in impacts to production and restoration expenses in fiscal 2016 and fiscal 2017. We are now devoting every effort to minimize the impacts and to take thorough measures to prevent similar accidents in the future.

Ensuring the safety of people at NSSMC is our first priority and essential value. It also forms the base of our daily business activities. We have identified 2017 to be "a year dedicated for safety enforcement," aiming for zero serious accidents. Learning lessons from the past, we are taking five approaches and thoroughly executing them. These approaches are: to support priority workplaces which face serious safety issues; to accelerate making equipment inherently safe; to eliminate repetition of similar accidents; to establish or enhance special safety-related operations and

the systems that support them; and to implement measures to improve safety levels of subcontracting companies.

Manufacturing begins from developing human resources

Various initiatives I have discussed so far can only be realized by people. I strongly believe that manufacturing begins with developing human resources. Society and the economy are always changing at a fast speed and the stage for performance of business activities is expanding globally. For sustainable growth of a company, it is crucial in every age to focus on developing human assets and creating the environment where people can work with pride from a long-term perspective. I believe this is one of my important assignments.

Contributing to the society with technologies and manufacturing capabilities

Since our company was founded, we have faced numerous big changes in the environment. Each time we tenaciously and passionately carried out the process of analyzing the problem, coming up with measures, executing them together, and resolving the problem. That is how we have achieved sustainable growth. Going forward, we will continue to work to achieve our full potential and bring out technology and products that help enrich people's lives, based on safety, environmental preservation, disaster prevention, and compliance. We also strive to contribute to society on a more global stage. I sincerely hope for your continued support and understanding for many years to come.

> June 2017 Kosei Shindo Representative Director and President

Positive cash flow dedicated to longterm investments and shareholder return

Steelmaking facilities are used for decades. A long-term perspective is therefore required in framing a financial strategy. In order to achieve sustainable growth, we find it critically important to have international competitiveness and reliable financial strength, that enable us to generate profit despite significant change in the business environment.

Improve financial position

In terms of financial position, we have improved the debtto-equity ratio from 1.06 at the end of fiscal 2012 to 0.71. Our aim is to achieve a debt-to-equity ratio of around 0.5, which is equivalent to the average level of an international "A" rating status.

Toward achieving a sustainable growth

We are making capital expenditures for enhancing competitiveness of mother mills, and doing so to promote global growth.

Return to shareholders

NSSMC's basic profit distribution policy is to pay dividends based on consolidated operating results. In the Mid-Term Management Plan announced in March 2015, we raised the consolidated payout ratio target from "around 20%" to "around 20%–30%" as the benchmark. The payout ratio was 28.4% of consolidated net profit in fiscal 2015 and 30.4% in fiscal 2016.

Roadmap to becoming the best steelmaker with world-leading capabilities

We are working to establish the Company in the Number One position in the global steel industry, a position secured by world-leading capabilities, by having numerous innovative technologies that support our growth strategy, by maintaining high market shares in the high-end products, and by having a network of manufacturing bases to timely deliver high-quality products to our customers around the world.

Mid-Term Management Plan measures to raise corporate value

Our technological capabilities are being exploited to the fullest to enhance our manufacturing bases in Japan and we are transferring the best practices we have cultivated in Japan to overseas businesses. Our domestic bases, as what we call "mother mills," are the fountainhead of competitiveness, while our overseas manufacturing bases, through best practices, will raise operating rates and maximize productivity, with the aim to expand profit.

 Technology
 Cost
 Global

 X
 Image: Cost
 Image: Cost
 Image: Cost

Our goal is to firmly establish our position as the best steelmaker, one with acknowledged world-leading capability, by enhancing our technology, cost, and global competitiveness, as set forth in the current Mid-Term Management Plan. NSSMC delivers high-end products that customers want and only NSSMC can manufacture to customers. And we do it with reliable delivery performance. This is how we aim to earn and retain their trust. We aim to keep growing and raise corporate value regardless of changes in the business environment.

Grow profit of overseas bases

STEP

Deployment of best practices

- Acquiring outstanding technological capability and cost competitiveness
- Consolidation and renovation of facilities
- Making Nisshin Steel a subsidiary
- High-level R&D investment
- Enhanced hiring and human resource development

NIPPON STEEL & SUMITOMO METAL CORPORATIO

STEP

Raise corporate value

Broadly support social infrastructure through steelmaking

OUTCOME

Toward becoming the best steelmaker, with world-leading capabilities

Increased production capacity 9 million tons (2012) → 21 million tons (2017)

- Focus on automotive, energy and resources, and infrastructure
- Business investment ¥300 billion (over 3 years)
- Raise NSSMC's shareholding of Usiminas (Brazil) and Vallourec (France)

Medium- to long-term growth potential in demand for steel, along with the economic growth of emerging countries and the resultant improvement of daily life of their people Anticipating adjustment of excess capacity in China to take some time, despite the government's move to reduce production capacity

By having technology, cost, and being global as keywords and high-end products at the core of its product mix, NSSMC will attain sustainable growth regardless changes in the business environment.

Becoming the best steelmaker with world-leading capabilities Advance of NSSMC technology

Our R&D operations, the best in terms of scale and level in the global steel industry, are the source of our competitiveness. In order to maintain and enhance this, and accelerate technological development, we are increasing R&D spending by about 10%. Enhancement of technological superiority through greater R&D operations is profoundly supporting our business strategy; namely, to enhance manufacturing technological capability in domestic bases, expand their best

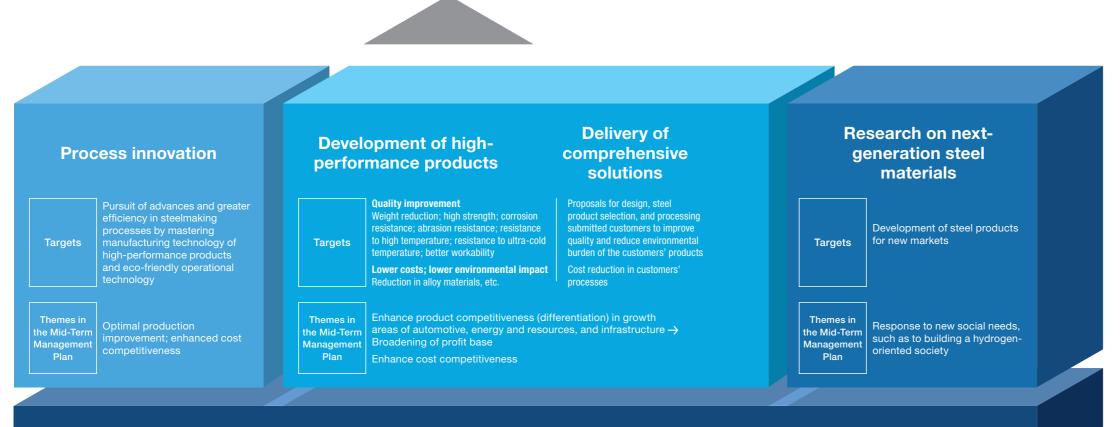

Basic technologies

Roadmap to becoming the best steelmaker with world-leading capabilities

practices overseas; and grow our position in the global market and particularly in high-grade steel products. Our R&D division is supporting our competitiveness through the following: (1) element and fundamental technology research, (2) process innovation, (3) development of highperformance products, (4) generation of comprehensive solutions, and (5) research on next-generation steel products. (1) Element and fundamental technology research means to make full use of analysis and mathematical techniques, and thoroughly investigate the rules and principles that support the foundation of all research and development. (2) Process innovation means pursuing advances and greater efficiency in steelmaking processes by mastering steelmaking. (3) The development of high-performance products means to respond to advanced needs of customers by expanding the functions of steel. (4) The generation of comprehensive solutions means

OUTPUT

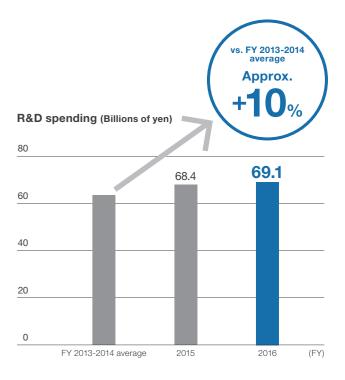

Enhance domestic manufacturing bases Deployment of domestic best practices into overseas

Progress in metallurgy, advanced analysis (i.e., nanostructure analysis), simulation and other technological areas, all on behalf of process innovation, high-performance product development, delivery of comprehensive solutions, and research on next-generation steel materials

enabling customers thorough use of steel by exploring ways to use steel. Finally, (5) next-generation steel material research is to dig up new social needs, such as to realize a hydrogenoriented society, and develop next-generation steel materials. Each of these research fields is organically linked and what we are aiming for is to develop unlimited possibilities by making use of their comprehensive strengths.

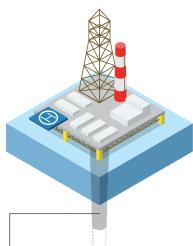

NSSMC's technology is embedded in the final products that help support people's lives

Steel made by NSSMC is turned into various final products and widely used in many areas of society, such as the automotive, energy and resources, and infrastructure sectors.

These products are daily contributing to improvement of the quality of people's lives. For example, CO₂ emissions during product use have been reduced, enhanced durability and strength has improved safety, and prolonged service life of products has led to cost reduction. We at NSSMC are supporting progress of these products with our technological capability.

ABREX[™], abrasion resistant steel plate

Due to having very high hardness, ABREX[™] has strong abrasion resistance, prolongs the service life of structures, and enables weight reduction. With this addition in its product line to the world's highest-level hardness ABREX600 and the steel plate as thin as 4mm in thickness, ABREX[™] stands out in workability and is widely used in many countries as abrasion resistance material for construction machinery and other various industrial machinery.

Corrosion Resistance Steel for Painting Cycle Extension, CORSPACE™

CORSPACE[™] reduces the environmental burden of steel structures susceptible to the salt damage. It does so by a prolonged service life of paint, reduction in maintenance costs, and reduction in frequency of repainting. Adoption of CORSPACE™ for bridges, port facilities, and other structures exceeded 5,000 tons on a cumulative basis and is steadily expanding.

High-allov oil country tubular goods (OCTG) NSSMC's high-alloy OCTG, used in exploitation of natural gas that exists in high-pressure, high-temperature harsh corrosion environment. is highly trusted by oil majors and other customers across the world, due to the steel's high strength and corrosion resistance. We have established mass production technology for large-diameter OCTGs, which can help further enhance customers' production efficiency and have succeeded in developing the new high-alloy OCTG, having ultra-high-strength of 965MPa, for the development of ultra-deep natural gas fields.

Titanium steel sheet for the fuel tanks of motocross bikes NSSMC's titanium steel sheets,

being lightweight and excellent in press formability and weldability, have been adopted for Honda's motocross bikes. This is the first time in the world that titanium was adopted for the fuel tank of massproduced bikes.

Photo from Honda Motor Co., Ltd

NSGP[™]-1 and NSGP[™]-2, highly corrosion resistant steel plates for crude oil tankers

NSGP™-1 and NSGP™-2 maintain corrosion resistance of the bottoms and ceilings of cargo oil tankers, in order to prevent corrosion, which entails the risk of oil leakage, while having almost the same usage performance as conventional steel in such respects as to welding and processing. Since the amendment of the SOLAS Convention*, these products were the first of this type in the world to be approved by public. institutions and made it possible to eliminate much painting. *The amendment of the SOLAS Convention requires corrosion prevention methods based on painting that conforms to painting performance standards or alternative measures such as the use of corrosion resistant steel for COT for crude oil tankers of 5,000 DWT or more.

NSafe[™]-Hull, a steel plate for shipbuilding with excellent collision safety

NSafe[™]-Hull is a new steel plate that has excellent ductility and substantially improves a ship's collision safety. It was accredited by Nippon Kaiji Kyokai (Class NK), the first such recognition in the world. In addition, in 2016, a bulk carrier adopting NSafe™-Hull was assigned Class Notations from the same association, again the first in the world.

Gyropress Method™, a self-propelled rotating and pressing method, using steel pipe pile with end bits

Gyropress Method[™] is for building river revetments, earth retaining walls for roads, and foundation structures, by installing steel pipe piles in a line, without dismantling the old underground structures. The method causes little noise and vibration, requires little soil removal and limited working space, and is thereby environmentally friendly. It enables improvement or renovation of the structures in a short construction period

hydrogen environments HRX19[™] has excellent resistance to hydrogen gas embrittlement, caused in high-pressure hydrogen environments, as well as high strength and excellent weldability. HRX19[™] has been adopted as a material that contributes to cost reduction and improvement in maintainability and safety for filling stations to supply hydrogen, the next-generation vehicle fuel, which are gradually increasing in number.

High-tensile-strength steel materials for automobiles

Permanent magnetic retarders for medium

A retarder is a device used to control frequency of

applying a foot brake and thus contributes to safe

and light in weight, besides being excellent in

efficiency and curb emission of exhaust gas.

maintainability. They contribute to improved fuel

driving. NSSMC's retarders are comparatively small

to large-sized commercial vehicles

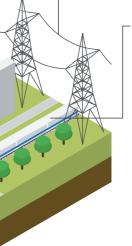

21

VIEWKOTE™ premium series, prepainted steel sheets for home appliances

VIEWKOTE™ is a high-performance steel sheet with various features and allows home appliance makers to skip the painting process. NSSMC offers various types of VIEWKOTE™, including a high-heat absorption type that facilitates heat discharge from flat-panel TVs, audio devices, and other smaller devices; an "orange-peel surface" type that makes scratches less visible; an antistatic type that reduces dust adhesion caused by static electricity; a resistance-to-staining type that resists contamination of oil and other stains in the kitchen: and a self-cleaning type that offers excellent resistance against rain drops and other stains and are used, for example, in the outside unit of air conditioners.

Tough Guard[™] Hard, high-corrosion resistant coated hard steel wire

Tough Guard[™] Hard has realized high corrosion resistance in the normal air environment than conventional Zn-Al alloy coatings. The prolonged service life contributes to reduction in maintenance costs.

Railway wheels

In addition to having strength needed to contribute to higher safety, NSSMC's railway wheels have abrasion resistance and are resistant to brake overheating. They also repress noise and vibration, and have a long service life. Our wheels are used by all railways in Japan. International recognition of Japan's railway technology, particularly for high-speed railways and heavy-load freight railways, has supported demand for NSSMC rails

HRX19™, stainless steel designed for high-pressure

NSSMC's high-tensile-strength steel materials for automobiles help overcome two challenges: improvement in fuel efficiency by reduction of vehicle body weight, and ensuring the safety of passengers at the time of a collision. The materials are also superior in workability. Roughly 60% of steel used in the average vehicle body is high in tensile-strength and that steel is also adopted for outer panels, suspensions, inner panels, structural materials, reinforced materials, and other parts.

Three-dimensional hot bending and direct quench (3DQ)

The 3DQ technique is to locally heat steel tubes, bend them as required, and then immediately quench them. By using the 3DQ technique, we have reached the threshold of tensile strength of 1,500MPa, enabling both safety and weight reduction, high form accuracy, and have made it possible to produce a thinner front pillar and hence better driver's visibility.

Becoming the best steelmaker with world-leading capabilities Pursuing global utilization of intellectual property

One of NSSMC's Management Principles is to "pursue world-leading technologies and manufacturing capabilities." The basis of our intellectual property (IP) activity is to secure the most advanced newly created technologies and other ones as IP and then to utilize the IP to meet our medium- and long-term IP strategy in line with our business strategies.

Priorities

The IP Division collaborates with the Business Divisions and the R&D Divisions to support the Company's global strategies. We have been focusing on enriching and accumulating IP as "an effective leverage to compete in the world, and with the world" both in terms of quality and quantity and have also been reinforcing the strategic utilization of our IP.

Roadmap to becoming the best steelmaker with world-leading capabilities

Specific activities

Enhanced IP protection

I. Support the creation of new IP

- 1) Build the IP portfolio and plan its strategy
- 2) Enrich the function of establishing rights for inventions, discoveries, and IP (specifically, enhance the function of Nippon Steel & Sumikin Research Institute Corporation)
- II. Enhance the protection and utilization of IP
- 1) Apply for patents of high technical levels in Japan and overseas, and actively utilize overseas-registered patents (Number of patents held: approximately 15,000 in Japan and 12,500 overseas as of May 2017; named a Top 100 Global Innovator in 2017 for fifth consecutive year by Clarivate Analytics, formerly Thomson Reuter)
- 2) Increase overseas relocation of personnel in charge of IP and establish a strategic public relations (PR) organization 3) Establish brand strategies

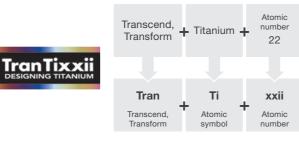

Address the enhanced protection of trade secrets

Japan's Amended Unfair Competition Prevention Act was enforced starting on January 1, 2016. In accordance with the spirit of this amended Act, we are enhancing initiatives to think about a code of conduct on safeguarding business secrets and to reflect it in our daily operations. Meanwhile, we engage in active sharing and utilization of technological information that ought to be shared, without excessively worrying about information leakage and disrupting sharing. We also continue to strictly deal with counterfeit products as well as any illegal use of our corporate name, brands, IP, and other properties.

Strategic establishment of brand families

We have launched 🕅 SteeLinC[™] as a brand of the Bar & Wire Rod Unit of the NSSMC Group and engage in activities to promote and enhance the brand value of its products and services. NSSMC started brand development of TranTixxii™ by designing titanium products in February 2017. At the same time, the brand logo for the new stainless steel HRX19 TM for use in high-pressure hydrogen environments and with growth in adoption, has been adopted. Both of these products are leading their respective markets in terms of technology and quality.

Naming concept

We plan to look into strategically establishing brand products with strong messages and appealing power in our other businesses and product areas so that our customers can accurately recognize their features and values. At the same time, we will promote activities to communicate and share NSSMC's value to many of our stakeholders.

Becoming the best steelmaker with world-leading capabilities

Aiming to achieve the world top-level cost competitiveness to prevail in global competition

In the current Mid-Term Management Plan (FY2015-FY2017), NSSMC aims to realize cost reduction equivalent to ¥150 billion or more per year (non-consolidated basis) from two sources. One is maximizing the remaining synergy effects of ¥60 billion out of ¥200 billion in accumulated effects since the integrationthrough our optimal production network (raising capacity utilization of the entire iron-making process, consolidation of downstream processing, etc.); adoption of best technological practices of the former two companies; synergies from integration of Group companies; etc. The second source for ¥90 billion is from realizing effects of investments to improve operations, including measures to refurbish coke ovens and improve yields. In addition, we are working at enhancing cost competitiveness through synergy effects with Nisshin Steel, which became our subsidiary in March 2017.

Facility consolidation and refurbishment of coke ovens

The Kimitsu Works ceased operation of one of its three blast furnaces at the end of fiscal 2015 and has raised productivity of the remaining two to the world's top level, realizing cost reductions while maintaining production capacity. The Yawata Works plans to start operating only one blast furnace by the end of fiscal 2020 and to consolidate all iron-making production processes in the Tobata area. In addition, iron-making competitiveness will be enhanced by improving coke production capacity through the refurbishment of coke ovens and by cost reduction through purchase of coke from outside the Company.

We are aiming to acquire competitive advantage by taking such measures to raise facility efficiency.

Realize synergy effects with Nisshin Steel

NSSMC and Nisshin Steel are projecting to generate ¥20 billion or more per year from the following synergy effects, which include rationalization of the iron and steel-making process, involving cessation of operations at the Kure Steelworks No. 2 blast furnace, and achieving a higher operating rate by NSSMC's supply of steel slabs as an alternative source to Nisshin Steel

Cost reduction (Billions of yen) Steady progress in cost reduction 60 FY 2015-2017 Mid-Term Manage Plan's target 40 ¥150 billion or more 60 FY 2013-2014 target 120 ¥180 billion

2013 2014 2015 2016 (FY)

Consolidation of major domestic facilities

		At the time of integration	End of FY2020	Cessation of production lines	Cessation production	
	Blast furnace	14	12	-2		
Upstream	Converter	32	28	-4	Downstream	-14
processes	Continuous casting	30	27	-3	processes	-14

Latest status of the refurbishing of coke ovens

Steelworks	Details	Completion time	Capacity
Kashima	Construction of 1F coke oven	Started operation in Aug. 2016	Approx. 340,000 tons/year
Kimitsu	Refurbishment of 4 cokes	Started operation in Jan. 2017	Approx. 900,000 tons/year
Kashima	Construction of 2E coke oven	Apr. 2018	Approx. 580,000 tons/year
Kimitsu	Refurbishment of 5 cokes	Second half of fiscal 2018	Approx. 900,000 tons/year
Muroran*	Refurbishment of 5 West coke oven	First half of fiscal 2019	Approx. 280,000 tons/year

*Hokkai Iron & Coke Corporation

Examples of synergy effects

Pursuit of best practices in operating technology, facility maintenance, etc.

Purchasing cost reduction of materials, equipment, etc.

Pursuit of efficient production for the entire Group

More efficiency of Group companies

Capital and cash flow management

Fixed cost reduction by avoiding large-scale investments, including refurbishment of blast furnaces Higher operating rate by NSSMC's supply of steel slabs Becoming the best steelmaker with world-leading capabilities Enhance global capacity

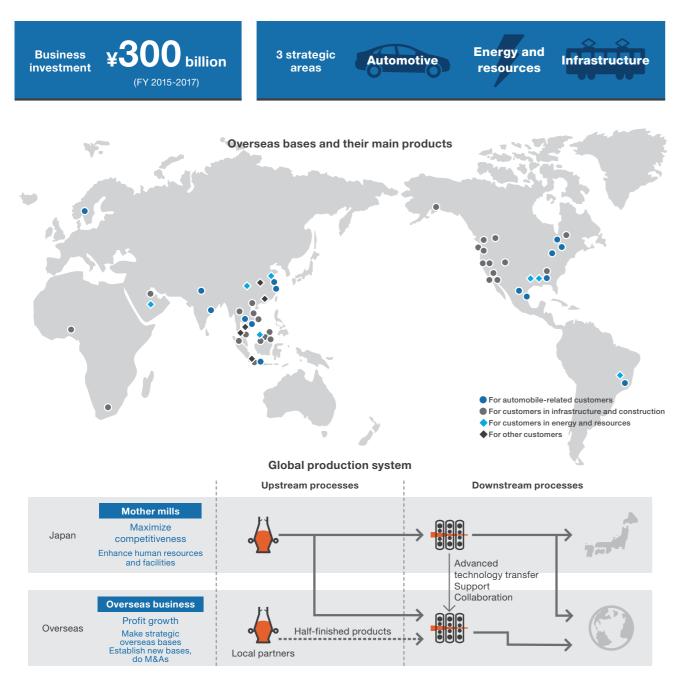

Seeking to capture demand in the growing global market

NSSMC aims to expand profit in overseas high-grade steel markets, primarily in emerging countries with future growth potential, mainly in three key strategic areas of the overseas automotive, energy and resources, and infrastructure-related sectors, in which we are doubling overseas production capacity from 9 million tons at the end of fiscal 2012 to 19 million tons. Having Nisshin Steel in the NSSMC Group is further expanding capacity to 21 million tons.

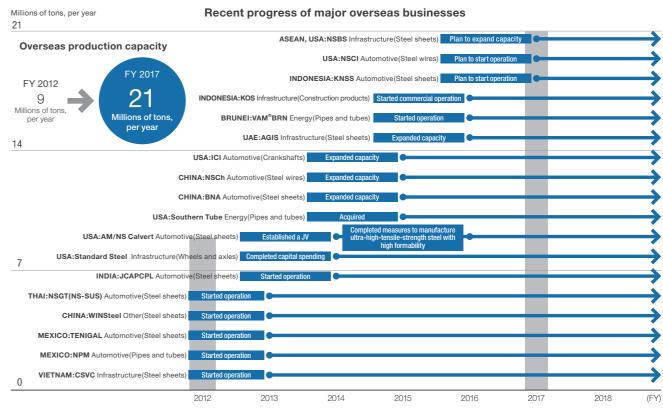

Roadmap to becoming the best steelmaker with world-leading capabilities

Many overseas bases, which started operation around the time of integration in 2012, have been steadily operating to begin contributing to earnings. We feel confident on progress of our global strategy.

We have allocated ¥300 billion for business investment over the three years up to fiscal 2017. We are establishing an organization that facilitates timely investments in prime opportunities to make a stepping stone for future growth.

Enhancing strength of the global business

Initiatives in the business in Brazil as an important overseas base ~Support Usiminas (Brazil) to become more competitive~

NSSMC's relationship with Usiminas has spanned more than 60 years since it began as a Japan-Brazil joint national project. NSSMC has mainly supported construction and start-up of its operation, beginning with the blowing-in of the No.1 blast furnace in the Ipatinga steelworks in early 1960's. We have subsequently actively carried out seven phases of technical assistance up to present. We have thereby consistently supported growth of Usiminas, which now boasts one of the best in technological strength in South America, and have jointly achieved steady growth as an important manufacturing base of high-grade steel in Brazil. The Brazilian economy is gradually showing signs of recovery from a negative growth period and Usiminas is recovering earnings, in line with a pick-up in the economy and domestic demand. In addition, Usiminas is making progress in improving earnings and financials by making capital increase of 1 billion reals and completing debt restructuring with major banks last year.

While there remains a significant challenge in establishing a stable management team, we seek to solve it at an early stage and prevent

recurrence of problems. NSSMC is determined to continue its support to Usiminas, so that it will be able to firmly establish itself as a manufacturing base of high-grade steel in Brazil and further develop its competitiveness in technology, manpower, and other aspects, and raise its corporate value.

Global strategy in the high-end OCTG business ~Strategic comprehensive partnership with Vallourec (France)~

For about 40 years, NSSMC and Vallourec have benefited from a partnership for VAM® premium connectors, a partnership which has served as a source of added value for NSSMC's pipes and tubes owing to its excellent properties such as high air tightness under high-temperature and high-pressure conditions, and high load bearing. We therefore want to expand our present limited scope of cooperation to a more comprehensive partnership, including product development processes and customer services. By doing so, we aim at further growing the VAM® brand. We will enhance our jointly operated seamless pipe manufacturing business in Brazil to make it remain profitable even in a difficult business environment.

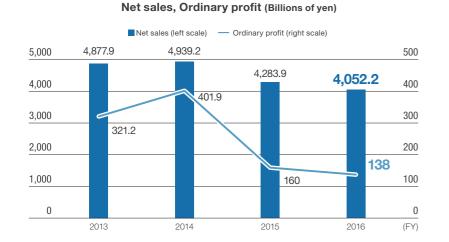

Steelmaking and Steel Fabrication

Fiscal 2016 business results and fiscal 2017 outlook

In fiscal 2016, the Steelmaking and Steel Fabrication segment recorded a decrease in sales and profit from the previous year at ¥4,052.2 billion in net sales (compared to ¥4,283.9 billion in fiscal 2015) and ¥138.0 billion in ordinary profit (compared to ¥160.0 billion), despite continued efforts for cost improvement such as reduction in material and fuel costs and yield improvement, and negotiations on sales pricing with customers in response to surge in raw material prices. However, domestic steel demand bottomed out in the first quarter (April to June, 2016) and is increasing mainly for

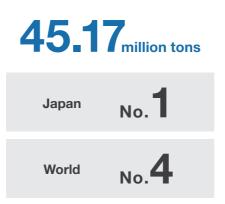

construction and automobiles, while in terms of overseas markets steel demand in ASEAN countries is recovering albeit moderately and demand in China is firm, triggered by stimulus measures and other factors.

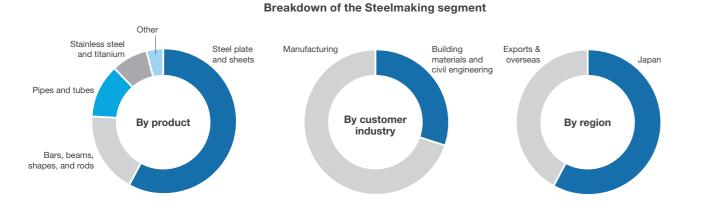

In fiscal 2017, as the global steel market is heading toward recovery, we will try to negotiate with customers on reflecting higher raw material prices on product prices and secure margins that allow us attain the reproduction capability. We will thereby plan to improve our earnings.

Steelmaking and Steel Fabrication

Strategy for each growth area **Automobiles**

Business Environment The overall global automobile market continues to be on a growth track, led by China.

Environmental regulations and crash safety standards have been enhanced for vehicles. CO₂ emission control is most strict in the European Union, where the 2021 emission reduction target of 95g/km has been set, and other countries tend to follow EU in targeting that level.

Energy constraints and consumers' increasing environmental awareness have led to expansion of the market for hybrid vehicles (HV), plug-in hybrid vehicles (PHV), and electric vehicles (EV). Fuel cell vehicles (FCV), often referred as next-generation eco-cars, have also made their appearance in the market.

As the movement toward industrial globalization continues to advance, automakers are expanding foreign production, synchronized worldwide launch of strategic car models is increasing, and the development period for a new vehicle is becoming shorter. As a result, automakers are demanding suppliers to confront this change in the business environment as well as changes in each company's requirements.

Applications

High-tensile steel used for outer panels, suspensions, inner panels, structural materials, and reinforced materials; electrical steel sheets for engine motors of eco cars; special wires and rods used for engines, transmissions, and suspensions; pipes and tubes; forged crankshafts; titanium and stainless steel foil for fuel cells, etc.

Advantages

NSSMC has world-leading technology in the development of steel products which combine contradictory performance requirements of car body weight loss to enhance fuel efficiency and higher strength for crash safety, and which are also superior in forming and welding. For example, our high-tensile automobile steel sheets have realized weight loss by being thinner, and our cold-pressed sheets of 1.2 GPa in strength has been commercialized. Steel sheets with strength of 1.5 GPa has already been developed and is currently under consideration for commercial application with some automakers. Also, for hot press processing, base material of 1.8 GPa in strength and galvanized material of 1.5 GPa in strength have been commercialized

Further, NSSMC can strongly support customers by making use of "coordination across different product types," which is a benefit from our unrivaled wide range of menus of product types and products, and "total solutions," which range from provision of materials to processing method and design of components. One example of the "coordination across different product types" is our success in developing electrical steel sheet specifically for drive motors of HVs, PHVs, and EVs and titanium foil for fuel cells for FCVs, together with high-tensile steel sheets that contributes to reduction of vehicle body weight loss. These are examples of how we excel and how we expand our competitiveness.

Strategy

Since early 1990s, NSSMC has been ahead of its peers in establishing a global supply network of steel sheets for automobiles. We are now manufacturing steel sheets in the United States, China, Thailand, Brazil, India, and Mexico to supply to global automakers which are expanding their local production. By the middle of 2017, we plan to start operation in a new base in Indonesia, expanding our globalization to better serve auto assemblers. Meanwhile, responding to an increase in synchronized worldwide launch of strategic car models, we are transferring technology to our overseas bases so as to deliver the same high-grade steel sheets overseas as in Japan. Some overseas bases already have capacity to manufacture ultra-hightensile steel sheets of 1.2 GPa in strength; other bases will follow. In bars and wire rods, NSSMC is also enhancing its overseas supply chain, by action including expansion of secondary processing bases in China and North America under the bars and wire rods business brand SteeLinC[™], with the aim of assuring stable supply of the similar high-grade products as in Japan.

Comparing environmental burden in manufacturing of materials of comparable performance

Regulations for vehicle fuel efficiency have been tightened literally year after year, leading to heightened importance of reduction in car body weight. NSSMC has responded to such conditions by making stronger steel products (high-tensile steel) to enable reduction in vehicle weight. Meanwhile, the enhanced fuel efficiency regulations have encouraged use of aluminum, carbon fiber reinforced plastics (CFRP), and other lightweight materials that have lower specific weight and higher specific strength than steel. While these lightweight materials contribute to improvement of fuel efficiency, they generate a much higher environmental burden associated with manufacturing compared to steel.

Steel is the best in the class in recycling

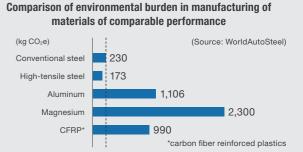

In the selection of materials for manufacturing vehicles, which are produced in such great quantities, recycling characteristics of materials for scrapped vehicles are critically important criteria. Material recycling can be broadly divided into "closed-loop recycling" and "open-loop recycling." In the "closed-loop recycling," materials of a disused product are processed without losing their original material characteristics and are re-used as the same material for numerous times. Steel is in the closed-loop category. In the "open-loop recycling," however, material or a product is finite and recycled in other ways, such as "cascade recycling," in which the original materials degrade in quality after recycling due to difficulty in extracting impurities, and "thermal recycling," in which heat generated from incineration is used as energy as the product is technically difficult to return to original materials. In addition, those materials which cannot be recycled must be sent to trash landfills for final disposal.

From the perspective of sustainability, the closed-loop recycling, which can be represented by steel, is often regarded as superior recycling. Steel is easily separated from other materials by use of magnetic force and has low environmental impact when being recycled. Economically-viable recycling of steel is well established. Moreover, impurities (elements) mixed in steel scrap can be easily extracted, resulting in minimum deterioration in quality and

From material production to product manufacturing, use of the product, and recycling and disposal; Importance of recognizing the advantages of steel based on the Life Cycle Thinking; and further pursuit of the potential of steel

enabling recycling into various steel products, according to specific requirements, and this can be done numerous times. Such features really make steel stand out as material, especially when compared to other lightweight materials which do not have such features.

Holistic reduction in environmental burden, based on Life Cycle Thinking

Compared to the small weight difference per unit strength between high-tensile steel material and other lightweight materials, the environmental burden in manufacturing and recycling features differ significantly between the material types. Whether these differences outweigh the difference in fuel efficiency improvement is a key point. This approach, to take a holistic picture of an entire life cycle of a product, from raw material extraction or production to end-product manufacturing, use, and recycling after taken out of use, is called Life Cycle Thinking. NSSMC will continue to promote activities to make more and more people to understand advantages of steel in the Life Cycle Thinking.

Pursuing potential of steel

The strength of steel materials commercially used today for automobiles is merely 10% of its theoretical strength, indicating huge potential to be explored for smarter use of steel materials. NSSMC will further raise the performance of steel to satisfy everadvancing requests such as for vehicle weight reduction and enhanced crash safety. We will also contribute to reduction in environmental burden over the overall life cycle of our products.

Steelmaking and Steel Fabrication

Strategy for each growth area Energy and resources

Business Environment Despite some signs of recovery, oil prices have been sluggish for some time. Nevertheless, over the long term, energy demand is expected to expand as the living standard will continue to improve in emerging countries.

At oil and natural gas development sites, existing oil wells and gas wells are likely to gradually become depleted, making the drilling environment severer. In such an environment, we are forecasting a gradual recovery in shipment of high-end products, where NSSMC has strengths.

Needs for renewable energy are rising in Europe and other places.

Toward establishing a hydrogen-oriented society, development of next-generation materials applicable for storage, transportation, and use of hydrogen is required.

Applications

High-end oil country tubular goods (OCTG); line pipes; pipes and tubes, and steel plates for boilers; ultralow temperature steel for LNG; steel plates for marine structures; steel plates for the penstock of hydropower generation; steel plates designed for wind power generation; pipes and tubes designed for high-pressure hydrogen environments

Advantages

NSSMC has an 80% global market share in oil country tubular goods (OCTG), which are used in the harsh high-pressure, high-temperature corrosive gas environment of drilling. Our advantages also include a line of products with distinctive features that have been made possible and practical by technological capabilities, such as steel plates for LNG tanks that contain a low amount of nickel and withstand use at ultralow temperature; boiler tubes for ultra super-critical power generation that contributes to reduction in CO₂ emissions by enhanced power generation efficiency; and tubes designed for high-pressure hydrogen environments, of great importance if there is a shift in the future to use of hydrogen to power motor vehicles. These tubes have excellent resistance to hydrogen gas embrittlement, but also have high strength and excellent weldability.

Strategy

We believe it is important to maintain and expand our worldleading technology level in steel materials for the energy market and firmly establish ourselves as a market leader, in order to realize a stable profit structure regardless of the market environment. In the OCTG area, we differentiate ourselves by bundling pipes with special threaded couplings that improve sealant at connections. We are thereby aiming at further fortifying our longstanding relationship of trust with the oil majors.

Strategy for each growth area

Business Environment

Construction and civil engineering

Along with growth in infrastructure-related demand, many emerging countries are facing issues related to larger, more advanced infrastructure plans and rising construction costs that stem from wage increases and other factors. Contrary to mainstay concrete structures in emerging countries, needs are rising in connection with steel structures, as advanced precast steel enables shortening of construction periods, and thereby results in cost reduction.

Railways

Rail stands out as a means of transportation that results in lower CO₂ emission and less environmental burden and the railway-related market is anticipated to expand in the medium to long term. Going forward, passenger railways will be planned, designed, and built for faster speed while freight railway will be required to have higher load capacity per freight car.

Applications

Construction and civil engineering

H-beams, steel sheet piles, steel pipe piles, rails, and other steel materials used in the civil engineering and construction sectors

Railways

Railway steel wheels, axles, bogies, rails, etc.

Advantages

Construction and civil engineering

NSSMC has excellent technological and product competitiveness, accumulated in the Japanese market where numerous buildings of cutting-edge steel structure have been built. We have various construction methods and products, which excel in measures against noise and vibration, environmental measures, or quake resistance, shortening of construction periods or reduction of costs.

Railways

The trend of higher speed of passenger railways and increased load capacity of freight railways provides opportunities to boost demand for NSSMC's products, which offer outstanding features such as safety (high quality), high performance (low vibration and low noise), high strength, and long product life.

Strategy

Construction and civil engineering

Mainly in emerging countries, in cooperation with local major universities and other academic institutions, NSSMC is promoting initiatives to disseminate its advanced steel structure technology with the ultimate objective of expanding the market.

Railways

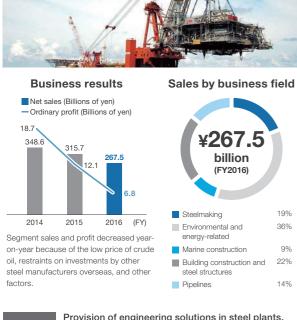

Having made capital investments in our North American manufacturing base for railway wheels and axles in fiscal 2014, NSSMC can now manufacture wheels of the same quality in Japan and the United States. By using such facilities and through continuing attention to improving product quality, we are raising our market share in high-end railway wheels, with our eyes on growth potential in demand in both Japan and the United States.

Growth strategy of non-steel business segments

Two objectives of non-steel businesses (Engineering and Construction; Chemicals; New Materials; and System Solutions) "Maximize synergies with steelmaking" and "Reach top-class profitability in each sector"

Major business areas of the non-steel business segments -Engineering and Construction, Chemicals, New Materials, and System Solutions - are closely linked with the steelmaking business. The Engineering and Construction segment designs and builds steelmaking plants; the Chemicals segment uses tar, a by-product from coke ovens; the New Materials segment utilizes the innovations and basic technology of NSSMC's R&D divisions; and the System Solutions segment creates IT solutions to support efficient production in the steelmaking business. These are the business domains that can pursue synergies with NSSMC's core business of steelmaking. The non-steel business segments are also engaged in businesses that evolved from the above main businesses. The Engineering and Construction segment works in engineering

> **ENGINEERING & CONSTRUCTION** (Nippon Steel & Sumikin Engineering Co., Ltd.)

Provision of engineering solutions in steel plants, environmental and energy, marine, building construction and steel structures, pipelines, and new business fields.

Strategy

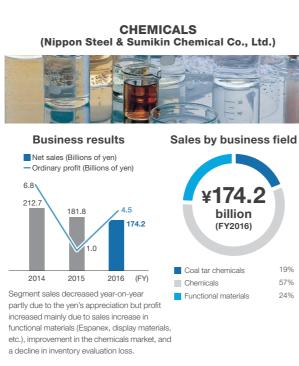

Business

field

Nippon Steel & Sumikin Engineering (NSSE) plans to expand its value chain including plant operation and maintenance, centering around the EPC* business, by enhancing the capacity to provide optimal "EPC X Solutions" that are appropriate to customers' requirements. NSSE is also strengthening its local organizations in the overseas growth areas and developing business that matches local needs. Furthermore, responding to changes in the external environment. NSSE intends to flexibly cooperate with outside parties or internal sources, such as technology and knowhow of each business field, and to become a more resilient and flexible complex entity, with the aim of achieving stability and growth in profit.

*EPC: building and construction services that include Engineering, Procurement, and Construction

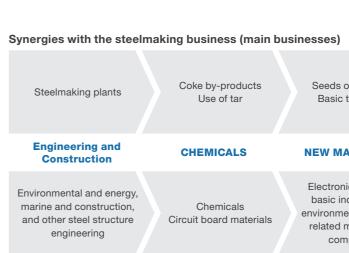

in the environmental and energy, marine and construction, and other steel structure fields; the Chemicals segment undertakes the development of chemicals, such as styrene monomer, and materials such as circuit board materials; the New Materials segment has electronics industrial, basic industrial, and environmental and energy-related materials and components in its product portfolio; and the System Solutions segment is engaged in business solutions for non-steel industries including the financial and government sectors. The first objective of the non-steel business segments is to maximize synergies with steelmaking. The second objective is to realize top-class profitability in each respective industry through their operations in various business areas that evolved from the main areas.

Engaged in a wide range of business lines, including carbon materials, functional materials, resin materials, Business and other chemicals, by combining coal chemicals and petrochemical by-products of the steelmaking processes.

Strategy

Nippon Steel & Sumikin Chemical (NSSC) is implementing the 2017 Mid-Term Management Plan, in which achievement of an enhanced business base is pursued by establishing a stable profit structure and working to achieve sustainable growth. In order to achieve the segment's numerical targets of ¥180.0 billion in net sales and ¥8.0 billion in ordinary profit, NSSC must strengthen its business base mainly by management of costs, as stated in the basic policy of the Mid-Term Management Plan, and swiftly establish a stable profit structure centering on its four main business sectors-coal chemicals, chemical products, functional products, and epoxy resin products. Furthermore, in addition to electronic materials, NSSC intends to create new businesses centering on the automotive and infrastructure areas by utilizing its core technologies in carbon and resins

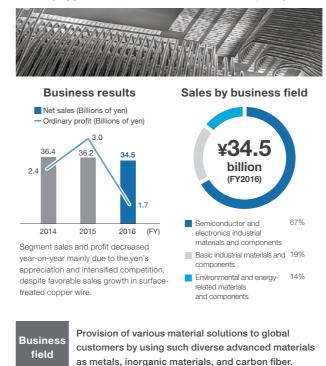

Chemicals

ngineering and

NEW MATERIALS (Nippon Steel & Sumikin Materials Co., Ltd.)

Strategy

Consistent with the motto "Innovate the world with advanced materials," Nippon Steel & Sumikin Materials (NSSM) aims to become a world-leading company in each business area by acquiring distinctive technologies and achieving international cost competitiveness. The three targets of strategy are as follows. To contribute to the creation of value for customers: By emphasizing matching solutions to customers' true needs, NSSM will contribute to value creation for our customers. To promote global business development: Our production and sales bases in Japan and seven other countries will cooperate to meet increasing global demand, and thereby enhance the level of service for global customers. Domestic bases will fulfill the role of mother plant: NSSM will promote the development of original new products, thoroughly pursue higher productivity and cost reduction at our domestic bases, and expand similar efforts at our overseas bases.

field

Strategy

In keeping with the advent of widespread use of digital innovations in IT for business. NS Solutions is further strengthening its conventional System Integration (SI) business model, which we now call "NSSOL1.0," and is developing new ones, NSSOL2.0 and NSSOL4.0. NSSOL2.0 is for building long and deep partnerships with clients, mainly in cloud services and IT outsourcing services, jointly developing new markets, working on the real issues of clients, and ultimately helping them grow their business. NSSOL4.0 aims at exploring new business fields arising from digital innovation, such as IoX* solutions and use of AI.

*IoX: NS Solutions' registered trademark, meaning a concept to integrate Internet of Things (IoT) and Internet of Humans (IoH)

Corporate Governance

The NSSMC Group aims to respond to the confidence and trust extended by shareholders, business partners, and all other stakeholders, and to achieve healthy sustainable growth and medium- to long-term improvement in corporate value. For these purposes, the Group has established a corporate governance structure appropriate for its businesses.

Basic structure of corporate governance

NSSMC, with its core business being steelmaking, has adopted a structure in which a Board of Directors, mainly comprised of Directors with a thorough understanding of NSSMC's business, makes decisions on basic management policy and important business activities, while Audit and Supervisory Board Members, who hold strong legal authority, oversee from independent positions the execution of duties by Directors. Believing that this structure ensures efficiency and fairness in management and is effective for the Company, NSSMC has adopted the company system form of organization with an audit and supervisory board.

Audit & Supervisory Board Members, each having a thorough understanding of NSSMC's business, and Outside Audit & Supervisory Board Members, with deep insight, oversee the execution of duties by Directors and the status of the Company's assets on a daily basis, in cooperation with accounting auditors, and the Internal Control & Audit Division. In addition, the Company has Outside Directors, who have vast experience in fields such as corporate management, to enhance decision making from diverse perspectives at the Board of Directors'

2 meetings and through oversight of management. At present, NSSMC's Board of Directors consists of 11 Executive Directors, as well as 2 Outside Directors, who are not involved with business execution, and 7 Audit & Supervisory Board Members (of whom 4 are Outside Audit & Supervisory Board Members). This ensures full, multifaceted deliberations, and objective decision-making. In order for all Outside Directors and Outside Audit & Supervisory Board Members to obtain the necessary information and fully execute their role, they regularly meet with the Chairman, the President, and other persons to share management issues and exchange opinions.

Going beyond the disclosure of information based on the laws and regulations, and rules set by the financial instruments exchanges in Japan,
 NSSMC intends to clearly and accurately disclose financial and non-financial information at appropriate times, aiming at raising transparency of management and for accurate understanding of the NSSMC Group's operating situation on the part of every stakeholder.

NSSMC seeks to establish, appropriately manage, and continuously improve the internal control system to comply with relevant laws and regulations and ensure credibility of financial reporting and effectiveness and efficiency of operations. Aiming at establishing a healthy organization with workplaces of positive atmosphere, the Company focuses on dialogues in and out of the workplace, regularly carries out

4 organization with workplaces of positive atmosphere, the Company focuses on dialogues in and out of the workplace, regularly carries out opinion surveys of all employees, and has set up a whistleblower system to handle concerns among employees, Group employees, and their family members. Such additions are intended to establish a sound internal control environment.

5 NSSMC regularly checks and reviews the corporate governance structure and its management status, including the analysis and evaluation of the effectiveness of the Board of Directors as a whole at a Board of Directors meeting, so as to autonomously make improvement by taking into account the opinions of Outside Directors and Outside Audit & Supervisory Board Members.

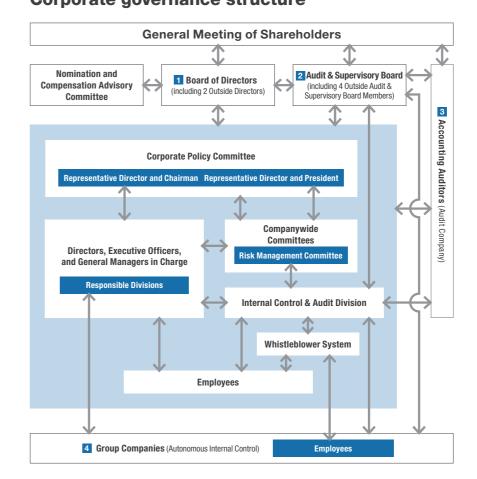

Corporate governance system

Independent Directors	At the time of integration (FY 2012)	4	→	FY 2017	6	
October 2015 Establishment of the Nomination and Compensation						

Corporate governance structure

1 Board of Directors

The Board of Directors comprises 11 Directors with a thorough understanding of NSSMC's business and 2 Outside Directors who hold independent positions. The Board makes decisions on important business activities in an appropriate and prompt manner and oversees the execution of duties by Director and Executive Directors. Outside Directors, who have vast experience and deep insight in fields such as corporate management, international affairs, and the economy, contribute to decision making from their diverse perspectives on NSSMC, thereby enhancing the overseeing function of management by providing their opinions and exercising voting power from their independent status at the Board of Directors' and other meetings.

3 Accounting auditors

Accounting auditors execute the accounting audit activities at NSSMC under the Companies Act and the Financial Instruments and Exchange Act. NSSMC has appointed KPMG AZSA LLC as accounting auditor.

Advisory Committee (comprised of the Chairman, the President, and three outside officers)

Execution of business activities

Based on the Company's Rules, executive decisions on key issues that may affect the activities of NSSMC or the NSSMC Group are determined by the Board of Directors, which convenes once or twice a month. after such matters have been discussed in a meeting of the Corporate Policy Committee, which is attended by the Chairman, the President, the Vice Presidents, and other members, and generally convenes once a week. As advisory bodies prior to the Corporate Policy Committee and Board of Directors' meetings, NSSMC has 23 companywide committees, each with its own objectives. The execution of business strategies mandated by the Board of Directors and other executive structures is promptly addressed by the Directors responsible for these businesses, Executive Officers, and the Heads and other General Managers of relevant units and divisions, under the direction of the Representative Director and President.

2 Audit & Supervisory Board

The present Audit & Supervisory Board comprises 3 full-time Audit & Supervisory Board Members and 4 Outside Audit & Supervisory Board Members. As an independent organization, the Board oversees the execution of duties by Directors. The Outside Audit & Supervisory Board Members contribute to NSSMC's sound and fair management, by, among other tasks, expressing their respective opinions independently at the Board of Directors, the Audit & Supervisory Board, and other opportunities, and performing supervisory activities, including auditing the business and affairs and the status of assets, based on their vast experience in, and deep insights into, such areas as corporate management, laws, public administration, public finances and corporate accounting. They also perform auditing activities including research on corporate operations and the status of assets. They thus contribute to NSSMC's sound and fair management.

4 Group companies

NSSMC Group companies have established and maintained an internal control system for which NSSMC's divisions in charge assist them as needed. In addition, NSSMC's General Manager of the Internal Control & Audit Division understands and evaluates the internal control status of the entire Group, and gives guidance or advice to each division and Group company.

Remuneration, etc., for Directors and Audit & Supervisory Board Members

1. Policies

NSSMC's policies on determining remuneration and other amounts for Directors and Audit & Supervisory Board Members are as follows:

(1) Directors

The amount of base remuneration for individual ranks that are deemed to measure up to each Director's required skills and responsibilities. This base remuneration varies within a certain range on the Company's consolidated performance. The Company then allocates monthly remuneration for each Director within the limits approved by the General Meeting of Shareholders.

(2) Audit & Supervisory Board Members

The Company allocates monthly remuneration for each Audit & Supervisory Board Member, within the limits approved by the General Meeting of Shareholders, taking into consideration the Audit & Supervisory Board Member's duties depending on rank and whether the Audit & Supervisory Board Member is full-time or part-time. Under the above policies, the remuneration of Directors is limited to a monthly remuneration, and entirely performance linked so as to grant incentives for the NSSMC Group's sustainable growth and improvement in corporate value. Changes in line with the consolidated performance are determined based on the Company's consolidated net performance and the Steelmaking and steel fabrication segment's ordinary income, and by taking into account the relationship with the Mid-Term Management Plan.

2. Method of determining policies

The policy for monthly remuneration for Directors is determined by a Board of Directors' resolution, and the policy on monthly remunerations for Audit & Supervisory Board Members is determined in consultation with the Audit & Supervisory Board Members.

3. Procedures regarding the determination of the amount of remuneration, etc.

The amount of monthly remuneration for each Director is determined by a Board of Directors' resolution after a proposal has been examined by the Nomination and Remuneration Advisory Committee, which comprises the Chairman, the President, and three outside officers who are nominated by the President. The amount of monthly remunerations for each Audit & Supervisory Board Member is determined in consultation with the Audit & Supervisory Board Members.

Remuneration of Directors and Audit & Supervisory Board Members in FY2016

Category	Number of recipients	Aggregate amount of remuneration (Millions of yen)
Directors	19	964
Of which, Outside Directors	2	28
Audit & Supervisory Board Members	10	207
Of which, Outside Audit & Supervisory Board Members	5	57
Total	29	1,172

Note: The above number of recipients includes 5 Directors and 3 Audit & Supervisory Board Member who resigned at the conclusion of the 92nd General Meeting of Shareholders held on June 24, 2016

Policy regarding cross-shareholdings and basic policy regarding the exercise of voting rights associated with those shares

NSSMC holds the shares of companies other than the Company's related companies as cross-shareholdings. This is mainly to maintain and enhance business relationships, maintain and develop alliances, and promote smooth business operation, with the ultimate aim of enhancing NSSMC's mid- to long-term corporate value. The rationale on holding those shares is regularly examined by the Board of Directors every year, by evaluating the issuing companies'

operating performance, financial position, and other factors in addition to the prevailing reasons of holding them. NSSMC exercises voting rights of those cross-shareholdings after each responsible division examines the details of the issuing company's proposals for the General Meeting of Shareholders and makes comprehensive judgements of whether they can contribute to improve the corporate value of NSSMC and the issuing company.

Outside Officers

Independence of Outside Officers (Outside Directors and Outside Audit & Supervisory Board Members)

NSSMC determines the independence of outside officers in harmony with the Independence Criteria for Outside Directors and Outside Audit & Supervisory Board Members set by stock exchanges in Japan, and with due consideration to their personal, capital, transactional, and other relationships with the Company. NSSMC decides the independence of outside officers in accordance with the independence standards set by

Support of and briefings to Outside Directors and **Outside Audit & Supervisory Board Members**

Personnel of the NSSMC General Administration Division and Audit & Supervisory Board Members' Office support Outside Directors and Outside Audit & Supervisory Board Members by providing timely and appropriate corporate information, which includes preliminary explanation of agenda items or items reported to the Board of Directors' meetings and other important meetings. In order to ensure the independence of Directors, the Audit & Supervisory Board Members' Office has designated staff who are dedicated to audit administration works, such as to assist auditing activities under instruction by all Audit & Supervisory Board Members, including Outside Members.

NSSMC gives briefings on its Corporate Philosophy and the group business activities to each Outside Director and Outside Audit & Supervisory Board Member when appointed. Opportunities to visit steelworks and research centers are also provided after their appointment.

Internal controls and risk management system

NSSMC resolved the Basic Policy concerning Internal Control System at a Board of Directors' meeting and stipulated its Basic Rules for Internal Control for establishing a system for internal controls and risk management.

- NSSMC establishes an annual plan on internal controls and risk management and acts accordingly.
- It regularly confirms the status of internal controls and the risk management system through the Risk Management Committee, chaired by the Executive Vice President in charge of Internal Control & Audit
- Each division of the Company designates a person in charge of risk management, while each Group company designates a person responsible for risk management. This is to encourage each division and company to take the initiative and share

Analysis and evaluation of the Board of Directors effectiveness

Based on individual interviews of each Director and Audit & in light of self-evaluations by each Director and Audit & Supervisory Supervisory Board Member on evaluation and opinions concerning the Board Member, It was confirmed that each agenda item, which management of the Board of Directors, NSSMC's Board of Directors was submitted and reported to the Board of Directors based on the regularly analyzes and evaluates the effectiveness of the Board as a Companies Act and internal rules, was properly explained in advance, whole, and use the results for improving the future management of the and was resolved after a question and answer session and a discussion Board of Directors. on a wide range of viewpoints of internal and outside officers, and with In the meeting of the Board of Directors held in April 2017, NSSMC the perspective of raising medium- to long-term corporate value. As a result, the Board of Directors was evaluated as effective.

carries out an evaluation of the effectiveness of the Board as a whole,

the financial instruments exchanges in Japan (e.g., Tokyo Stock Exchange), considering each individual's personal relationship, capital relationship, business relationship, and other interests with NSSMC. As stated above, since NSSMC believes that each of the outside officers is independent, NSSMC has reported all of them as independent officers to each financial instruments exchange in Japan (e.g., Tokyo Stock Exchange).

Attendance of meetings of the Board of Directors and the Audit & Supervisory Board in FY2016

information about risk management among the Company and Group companies through regular meetings and other means.

- NSSMC regularly checks the Groupwide status of internal controls by establishing measures to check and supervise matters related to internal controls and risk management.
- NSSMC has set up a whistleblower system—namely, the Compliance Consulting Room within the Company and the Compliance Hotline run by the Company's attorney- as a conduit for communication, to handle risk-related concerns among Group employees, staff of purchase agreement companies, and other Group employees regarding the execution of operations. This helps prevent accidents and the violation of laws and regulations preemptively and also improves operations.

Business investment management system

NSSMC seeks to make appropriate decision making on business investments, such as for founding and equity investing in companies in Japan and overseas, as well as for M&A deals, to find early and solve promptly issues during the stage of execution of those deals, and share and preserve such know-how, by having a PDCA cycle in the management system.

Proposed projects are considered in terms of significance to business strategy, market growth, competitive landscape, and individual risks (country, partner, foreign exchange, and other risks). In the case of M&A deals, based on due diligence, their risks are to be understood and appropriately funded. After such a procedure, we confirm the certainty of generating return that matches investment, given consideration to risk scenarios.

Investment and Loan Committee

The Investment and Loan Committee discusses projects from a professional perspective of each corporate unit and division. The business investment projects are submitted to the Corporate Policy Committee after being discussed at the Investment and Loan Committee. Very important projects are then submitted to the Board of Directors.

2

2. Execution evaluation

Immediately after the project start-up, Key Performance Indicators (KPI) are set up for each project and their updated situation is regularly monitored by the corporate division, to know of progress and identify issues at an early stage. Also, after a certain period from the start-up, an interim study and report ("accomplishment report") are made to share insights and know-how acquired and to utilize them in considering future business investments.

After the interim reporting, financial soundness of the project company or companies is continuously evaluated based on the evaluation standards set by the corporate division, to determine and deal with any need for improvement.

Start-up and progress to follow

For about three years since start-up, KPIs for operation, production, shipment, financials, and other items are set up for each project, and the corporate division regularly follows its performance relative to the plan, and reports to the Investment and Loan Committee and the Corporate Policy Committee.

Accomplishment report

About three years from the start-up, the entire processes from decision making to full-scale operation are reviewed and reported to the Investment and Loan Committee and the Corporate Policy Committee.

Evaluation of soundness

Every year, all Group companies in which NSSMC has made direct or indirect investment are evaluated in terms of financial soundness, based on their financial data, and the results are reported at the Corporate Policy Committee. Companies with financial issues are asked to make a plan for improvement and their execution of plans is monitored.

Dialogue with shareholders and investors

Basic policy on dialogues

NSSMC is taking various initiatives to promote constructive dialogues with shareholders from the perspective of a target for sustainable growth and raising mid- to long-term corporate value. In general, dialogues with shareholders and investors, and coordination for these dialogues, are carried out by the General Administration Division, the Accounting & Finance Division, and other divisions in coordination, under the supervision of Directors in charge of General Administration and Accounting & Finance.

Measures to enhance dialogues

For shareholders, NSSMC strives to proactively provide information and cooperatively respond to questions raised by shareholders at

the General Meeting of Shareholders. In addition, the Company regularly holds corporate briefings and plant tours, and publishes information brochures to promote shareholders' understanding and enhance communication with them. For institutional investors and Management Plan presentation meetings, visits to steelworks and research centers, and other events, NSSMC discusses its strategies, businesses, operating performance, and other issues. Small meetings with investors, various conferences, and visits to overseas institutional investors are other means for enhancing communication.

Feedback to the Board of Directors and others

Opinions and comments received from shareholders and investors through the above occasions are regularly reported at Board of Directors' meetings and on other occasions.

Contributing to building a society with reduced environmental burden

Under the Corporate Philosophy to "contribute to society by providing excellent products and services," NSSMC is committed to implement our Three Eco-Friendly Initiatives; namely, the way we manufacture is "Eco-friendly" (Eco Process); what we produce is "Eco-friendly" (Eco Products[™]); and sharing our "Eco-solutions" (Eco Solution). Through these initiatives, we strive earnestly to engage in energy-efficient production activities, reduce waste in manufacturing processes, promote recycling, and thereby reduce environmental burden.

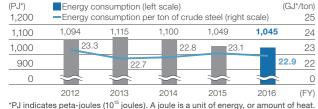

Promoting global warming countermeasures

The most effective way to act against global warming is to curb consumption. From the time of the first oil crisis to around 1990, NSSMC has intensively promoted continuous processing, exhaust heat recovery, and other measures, all to enable significant energy conservation. This has led to NSSMC and Japan's steel industry as a whole achieving the world's top-class energy efficiency.

NSSMC is striving to reduce CO₂ emissions by using energy generated in steelmaking processes, including power generation, through use of by-product gas or exhaust heat recovery, or by recycling waste plastics and discarded tires. As a result of these efforts, NSSMC and affiliated electric furnace and other companies^{*1} consumed 1,045 PJ of energy and emitted 91 million tons (preliminary figure)^{*2} of CO₂ in FY2016.

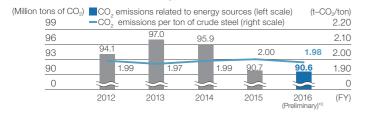

- *1 Affiliated electric furnace and other companies: Osaka Steel Co., Ltd.; Godo Steel, Ltd.; Nippon Steel & Sumikin Stainless Corporation; Nippon Coke & Engineering Co., Ltd.; five Cooperative Thermal Power Companies; and two Sanso Centers, etc.
- *2 Preliminary: A provisional value based on the assumption that the CO₂ level in a unit of purchased electricity in FY2016 is the same as in FY2015.

NSSMC's changes in energy consumption

PJ indicates peta-joules (10¹³ joules). A joule is a unit of energy, or amount of he GJ indicates giga-joules (10⁹ joules)

NSSMC's energy-derived CO₂ emissions

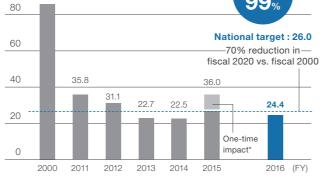

Contributing to the creation of a recycling-oriented society

Through recycling of in-house by-products, in its steelmaking process, NSSMC works for the realization of zero emissions, and is also actively engaged in the recycling of waste generated by other industries or in society. In the iron-making process, approximately 600 kg of by-products are generated for every ton of iron produced. In fiscal 2016, NSSMC produced 42.62 million tons of crude steel and generated 23.80 million tons of by-products. The majority of these by-products were recycled inside and outside the company, and the final disposal amount was approximately 240,000 tons, resulting in a high recycling ratio of 99%.

Moreover, NSSMC recycles waste plastics and discarded tires by using them in steelmaking processes. In the case of waste plastics recycling, NSSMC disposes about 200,000 tons of waste plastics, equivalent to around 30% of waste plastics being collected nationwide, based on the Containers and Packaging Recycling Act in Japan. Our cumulative amount of waste plastics up to the end of fiscal 2016 is approximately 2.68 million tons and the effects of reduction in CO₂ emissions amount to approximately 8.54 million tons.

NSSMC's final disposal amounts (Million tons)

*Including non-recurring waste (97,000 tons) generated by large-scale construction projects.

Contributing to the creation of a recycling-oriented society

NSSMC is promoting management of environmental risk with the aim of continually enhancing preservation of the environment in various regions, with due consideration of environmental risks, which differ by each steelworks or factory, and with due consideration to compliance with Japan's Air Pollution Control Act and other regulations. We are also engaged in reducing environmental risk throughout the Group.

Atmospheric risk management

In order to reduce emissions of sulfur oxides (SOx) and nitrogen oxides (NOx) and to curb emissions of soot and dust, we have implemented effective facility measures. In addition, we conduct constant monitoring and regular patrols to ensure that no abnormal emissions are released outside.

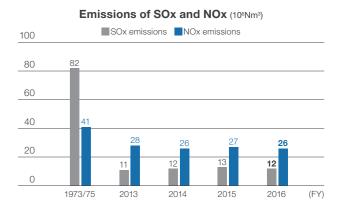

Water quality risk management

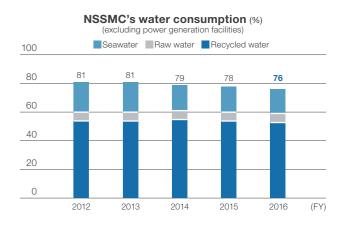

NSSMC uses approximately 6.0 billion m³ of freshwater a year at all of its steelworks and factories combined. Approximately 90% of this water is recycled or re-circulated. We try not to waste precious water resources, and to control wastewater discharge. In consideration of the importance of preventing water pollution, we have installed devices such as water discharge automatic monitoring equipment, water drain shut-off gates, and emergency water storage tanks to prevent abnormal wastewater to spill over outside the steelworks or factories.

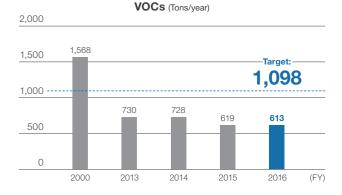

Comprehensive control of discharge of chemical substances

NSSMC appropriately manages and tries to improve the production, handling, and discharge of chemical substances such as VOC* in accordance with laws concerning the management of chemical substances as well as following the voluntary management procedures set by the Japan Iron and Steel Federation (JISF) and NSSMC. We also took the lead to promote the use of alternatives to steelmaking materials and equipment that contain hazardous materials such as asbestos and polychlorinated biphenyl (PCB). *VOC: Volatile Organic Compounds

NIPPON STEEL & SUMITOMO METAL CORPORATION

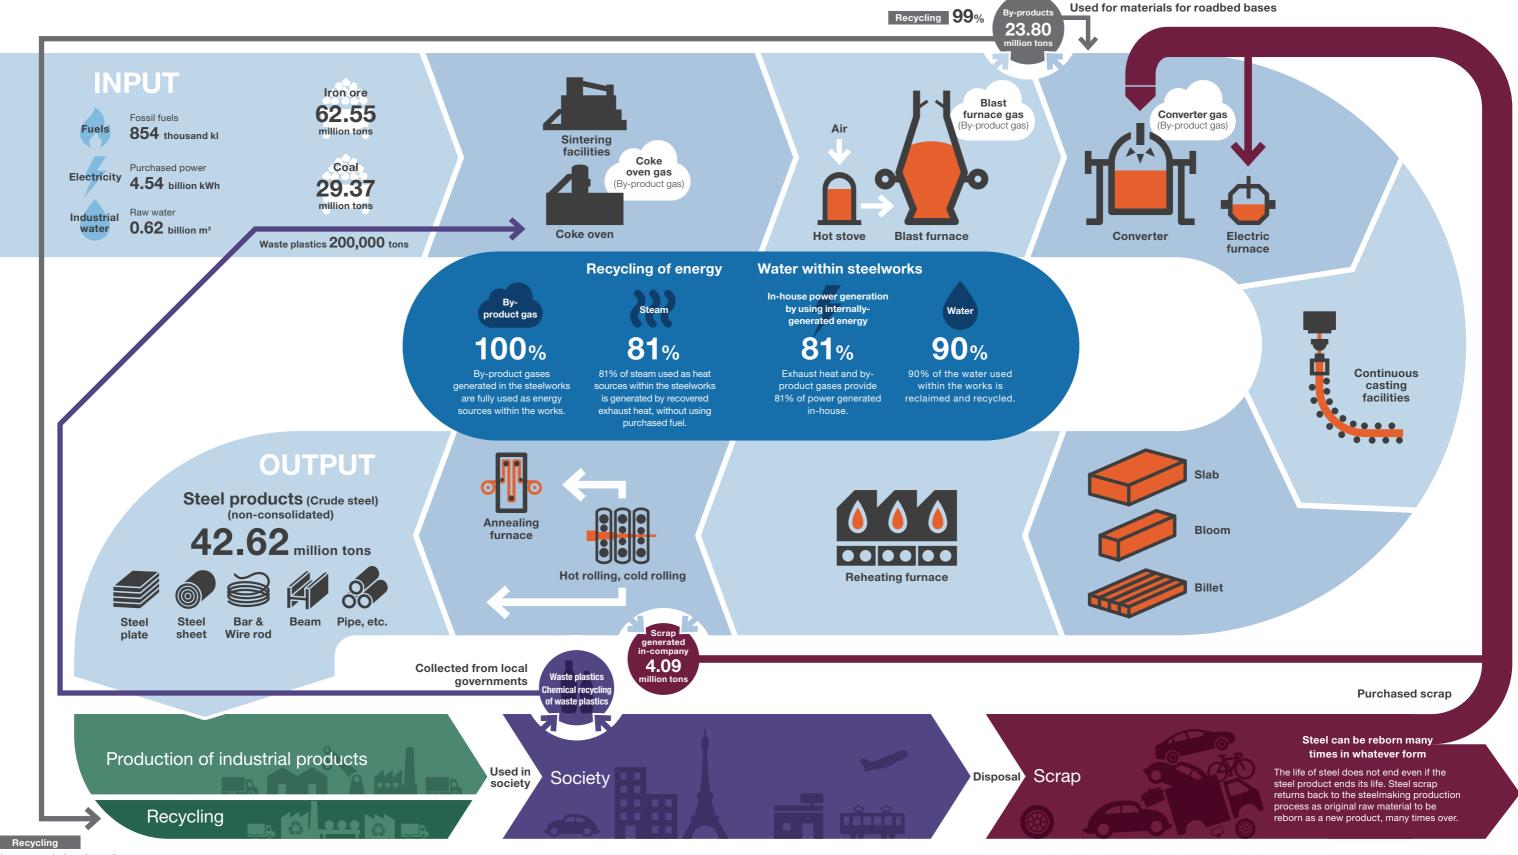

ECO PROCESS (THE WAY WE MANUFACTURE IS "ECO-FRIENDLY")

We aim at reducing the environmental impacts of our operations and manufacturing processes. We strive to efficiently utilize limited resources and energy at every stage of operations.

NSSMC's manufacturing bases are working rigorously to save energy in all manufacturing processes with the aim of reducing CO₂ emissions. For example, we try to achieve efficient use of equipment, higher combustion efficiency, and electricity savings. Water for cooling or washing products and production facilities is recycled and reused, while by-products generated in manufacturing processes are actively recycled and reused. In addition, steel used in society returns to the steelmaking production process as steel scraps and can be reborn as a new product many times over. Our long-accumulated know-how and technologies have enabled us to use resources and energy thoroughly and efficiently.

Sales or commissioned recycling Cement materials/Other industries

Eco productsTM (What we produce is "Eco-friendly")

NSSMC's eco-friendly products help reduce environmental burden.

Our products have advanced or highly specialized functions, are based on our technological capabilities and reliability, and are widely used in diverse areas of society. They contribute to promote (1) measures against climate changes by the saving of energy and a reduction in CO₂ emissions; (2) creation of a recycle-oriented society by lengthening product life and improving recyclability; and (3) environmental risk management by preservation of the environment and control of chemical substances.

Saving of energy and a reduction in CO₂ emissions (promoting measures against climate changes)

NSSMC is contributing to energy conservation by providing electrical steel sheet with higher conversion efficiency of electric and magnetic energy, and by providing steel products with high heat exchange efficiency. The Company is also contributing to reduction in CO₂ emissions through improved fuel efficiency by customers' use of hightensile-strength steel sheets, which are thinner and more lightweight.

ECO SOLUTION (SHARING OUR "ECO-SOLUTIONS")

The NSSMC Group's technologies help solve the environmental challenges of various countries throughout the world.

With the understanding that the transfer of Japan's advanced energy-saving technologies overseas can be one of the most effective ways to globally reduce CO₂ emissions, NSSMC is participating in global energy-saving and environmental initiatives in various ways including multinational and bilateral arrangements with China and India.

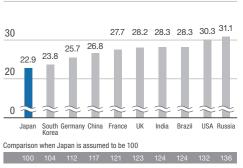

The Coke Dry Quenching (CDQ) power generation equipment uses the exhaust heat, which is collected while the hot coke is guenched with inert gas. *95 units of CDQ equipment are all from the NSSMC Group (Nippon Steel & Sumikin Engineering)

earnestly promoted continuous processing and exhaust heat recovery after the first oil crisis and until around 1990. This has resulted in their achieving the world's high-level energy efficiency.

The base that supports growth

NSSMC's sustained growth has been supported by our R&D organization that is world-leading in steel in terms of quality and scale, strong relationships of trust with customers, advanced purchasing strategy jointly fostered with suppliers, and various other assets we have accumulated over many decades. In addition, our cultur attribute of carefully developing and utilizing human resources, that create those assets, and our organization that encourages these people manifest their best are also our precious assets and part of the base to support growth We will further enhance such invisible values, which do not appear on the financial statements, hand them down to the next generation, and aim to realize further growth.

Organization	Technology	Custom	ers	
Employ	yees S	Suppliers	Society	

Our organizational strength contributes to realizing the best steelmaking.

Strong worksite teams are indispensable for steelmaking, which requires massive facilities. The correct functioning of an organization is critically important for team members, who need to maintain high morale and assume strong responsibility. We are always aiming to grow as organization.

Our Values

Nippon Steel & Sumitomo Metal Corporation Group will pursue world-leading technologies and manufacturing capabilities, and contribute to society by providing excellent products and services.

Management Principles

- We continue to emphasize the importance of integrity and reliability in our actions.
- We provide products and services that benefit society, and grow in partnership with our customers.
 - We pursue world-leading technologies and manufacturing capabilities.
- We continually anticipate and address future changes, innovate from within, and pursue unending progress.
- We develop and bring out the best in our people to make our Group rich with energy and enthusiasm.

Code of Conduct

The NSSMC Group aspires to fulfill its social responsibility by implementing the following nine principles set in this Code of Conduct.

- 1. Act with a strong sense of ethical values and in compliance with laws and regulations.
- 2. Develop and provide socially beneficial, good-quality and safe products and services, thereby earning the satisfaction and trust of our customers.
- 3. Engage in fair and free competition and proper business practices, and maintain a sound and proper relationship with political bodies and government agencies.
- 4. Actively engage with the public, disclosing corporate information in a fair and proactive manner, while carefully protecting and managing personal data and other types of information.
- 5. Create a healthy, safe and comfortable work environment, and respect the character and diversity of our employees.
- 6. Actively contribute, as a member of society, to global environmental preservation and to local communities and society.
- 7. Reject any relations with antisocial forces and organizations, and take a firm stance against all improper demands.
- 8. Comply with laws and regulations of relevant countries and regions, and respect international norms, cultures and customs in conducting our business operations.
- 9. Abide by this Code of Conduct and set up an effective mechanism to implement it. If a violation of this Code occurs, act promptly to determine the cause and prevent similar violations in the future, and make appropriate public disclosure.

Together with Employees

Our workforce assumes a vital role in our world-leading manufacturing.

We believe that our manufacturing starts with the nonstop development of our prized human assets. NSSMC strives to create the best environment to facilitate efforts of each and every one of our employees to accomplish goals and set higher standards each day.

Human development

NSSMC's launchpad for human resources development is on-the-job training (OJT). All supervisors are required to be accessible to his or her juniors, communicate with them every day, and teach them operational skills and help develop their ability to make judgments. Numerous off-the-job training (OFF-JT) programs are also available to complement these ongoing activities. They are constantly upgraded and modified to respond to changing needs over time.

First, the program for Training for All Job Classes, for all employees, helps them to acquire basic knowledge and skills required for each job class.

In addition, for fostering steel engineers who support advancement in technology, professional technology courses that range from basics to highly advanced as well as variety of other technological training sessions are available. A scheme to help all engineers, young ones and veterans alike, acquire knowledge in a systematic manner has also been established. In response to the mounting demands of globalization, NSSMC has initiated educational programs that include language lessons, intercultural learning programs, seminars prior to overseas assignment, and programs to study at a graduate school in the United States, Europe, or China, all with the aim of fostering people who can work on the global stage.

Balanced work-life

From the viewpoint of supporting the work of employees, we not only seek to provide a good work environment but also a good work-life environment for our employees and their families. We offer various welfare benefit programs that accommodate the needs of employees. These include dormitories, company housing, a childcare or family-care leave system, and the Work-Life Support Program, in which the company partly subsidizes expenses for childcare-related or other services, in response to individual applications by employees. We opened a 24-hour childcare center for use by shift work employees in three steelworks. We plan to open similar centers in other steelworks. We are enhancing support programs for our employees, who are raising children, in particular those shift work employees, who have a night shift.

Handover of skills and know-how

At manufacturing worksites, it is critically important for NSSMC's growth to have our veteran employees relay their accumulated skills and know-how to the next generation of young workers. Our method of transferring skills has evolved using such systemized teaching methods as visualized work procedures and comprehension tests.

Promoting diversity in the workplace

Within the NSSMC Group people of diverse backgrounds are working together in around 20 countries and regions, with the common aim of being the world leader in steelmaking. Also in many of our companies we have more female employees in important positions than in the past, even at manufacturing sites and in managerial positions.

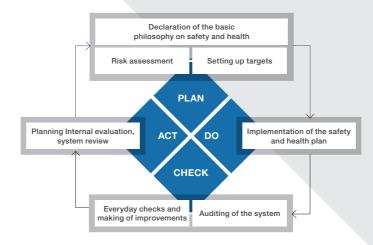

Respect for human rights

NSSMC respects human rights, gives due attention to the rights of workers, and staunchly opposes the use of forced or child labor. These are prerequisites of our corporate activities. We have also prohibited as unjust the discriminatory treatment of workers, and take such initiatives as organizing training sessions and other activities to enlighten employees and holding conferences for human rights enlightenment on a regular basis. In addition, we give careful consideration to the traditions and culture of each country or region as we accelerate overseas business development.

Safety and health at work

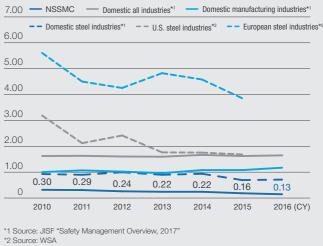

"The safety and health of employees at the Nippon Steel & Sumitomo Metal Corporation Group are the most important, top-priority values and the basis for supporting business development." In keeping with this Basic Philosophy on Safety and Health, we strive to ensure our worksites are safe, and free of accidents or injuries. Specifically, in order to thoroughly eliminate potential risks, we are now working on strengthening risk identification, making our equipment genuinely safer, and carrying out measures to prevent human errors. We are also taking initiatives for prevention of disaster recurrence and the analysis of past disasters. As for safety training, our Taikan Program (an experience-based safety education program), which allows employees to experience worksite risk through simulation, so as to better prepare them in anticipating and managing risk, has been enhanced. As for healthcare management, we have strengthened procedures for employees' medical checkups and examinations, and are promoting preventive measures on behalf of the mind and the body of employees.

Efforts toward safety and health management

Accident frequency rate

Aiming for further advancement in technology

NSSMC will expand the frontiers of steel and create the future

Iron is believed to be one-third of the Earth's weight. While its theoretical strength is said to be 10GPa, the strength of steel materials commercially used today for automobiles is merely 10% of its theoretical strength. What supports such a high level of manufacturing that combines huge scale and minute precision is NSSMC's maximizing the potential of steel as a material, that is, the challenge of "expanding the frontiers of steel."

R&D organization

NSSMC's approximately 800 R&D employees work in three core research centers—Futtsu in Chiba Prefecture, Amagasaki in Hyogo Prefecture, and Hasaki in Ibaraki Prefecture—as well as in the Plant Engineering and Facility Management Center (Head Office) and R&D Laboratories at steelworks across Japan. They make collaborative efforts to ensure integrated R&D activities that encompass basic and fundamental research and application development and engineering.

Since the integration and establishment of NSSMC in October 2012, we have consolidated research teams working in the same research field but at various sites. We have also clarified their roles and functions as well as those of R&D Laboratories in each of the steelworks. Work in a given research field is now done at a single location. By taking such measures, we have established an optimal R&D organization to maximize synergies. Our R&D capabilities feature six strengths: (1) comprehensiveness and speed of development, facilitated by the integration of R&D and engineering; (2) an R&D network having locations near customer locations; (3) integrated solutions enhanced by Group companies' products and technologies; (4) the ability to address environmental and energy-related concerns with solutions maximizing steelmaking process technology; (5) collaboration between industry and academic institutions, overseas alliances, and joint research with customers; and (6) an extensive portfolio of fundamental and platform technologies. Please see details on NSSMC's advanced technology on page 19, "Advance of NSSMC technology."

Comprehensiveness and speed of development, facilitated by the integration of R&D and engineering

Together with Suppliers

NSSMC aims to enhance competitiveness, together with suppliers

NSSMC purchases around one million product items of equipment and materials from gigantic facilities such as blast furnace to electric and mechanical products as well as safety, emergency, and office supplies from about 1,560 suppliers other than major suppliers of iron ore and coal. A top-flight purchasing strategy, with a focus on dialogues with suppliers, is indispensable for us to enhance manufacturing competitiveness. We do business with suppliers based on the following basic policy.

Compliance with laws

Basic policy

Fair disclosure of information and

quick transaction processing

Aiming to enhancing dialogue with suppliers under the Basic Policy, we began a "VoU (Voice of User) and VoS (Voice of Supplier) activity" in fiscal 2015 to collect opinions and comments of NSSMC's departments which use equipment and materials (users) and suppliers. Moreover, we are trying to advance to a higher plane of intelligence usage, by centrally analyzing and accumulating information, mainly from these activities, and using it to form a high-quality purchasing strategy.

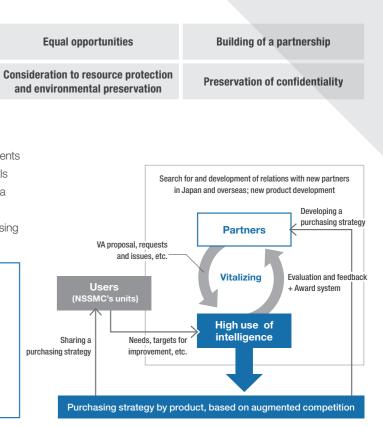

Foundation of a Partner Award System for dynamic utilization of VoS

Starting in fiscal 2015, we give annual awards to suppliers who make outstanding contributions to the improvement of quality and cost of equipment and materials. This award program has increased the number of unsolicited proposals from suppliers, creating a virtuous cycle in communication with suppliers. We intend to use the award system and actively promote the VoS activity for enhancing our purchasing strategy.

Supply chain management that reduces environmental burden

Based on the Life Cycle Assessment concept, NSSMC is taking initiatives in reducing environmental burden at various points along the supply chain. In keeping with rising demand for tighter management of chemical substances, we have created management standards for 16 toxic chemical substances, including cadmium, jointly with customers and suppliers. We then established a system to manage substances of concern contained in purchasing materials and products, including

Toxic material management concerning quality assurance

- packaging materials.
- In addition, as stipulated in the Charter of Corporate Behavior by Keidanren, we have set up internal rules, including an appropriate purchasing policy, which puts us on record as fully considering resource protection and environmental preservation.
- Concerning materials, we confirm with suppliers that conflict minerals are not in use

See the website for details http://www.nssmc.com/en/csr/customer/support.html

Together with Customers

Customer's trust is our precious asset.

NSSMC sees as an important role going beyond providing materials, to ensuring maximum value for customers from the use of materials we provide, with thorough "before & after" services. We make efforts every day to be trusted by customers, ensuring that our customers say, "only NSSMC can do this."

Customer evaluation example **Steel sheets for** home appliances

In 2016 NSSMC received from Panasonic Corporation the ECO-VC (Value Creation) Gold Award for the development of a new electrical steel sheet that satisfies both high efficiency and good scrap recycling of compressor VA. The ECO-VC Gold Awards are given to suppliers of Panasonic Group companies that make particularly significant contributions to reducing CO₂ emissions and making their products more competitive, out

of approximately 1,000 such contributions from suppliers. We were awarded this award for a seventh consecutive year from Fiscal 2010. Moreover, we also received a newly-established Special Contribution Award.

In Malaysia, Nippon EGaly Steel, an electro-galvanized steel manufacturing and sales subsidiary of the NSSMC Group, received the Best Supplier Award 2016 from Pioneer Electronics AsiaCentre Pte. The award was given to nine suppliers who made outstanding contributions to quality management, environmental response, cost competitiveness, delivery performance, technology, and services in regard to semiconductor & electrical parts and mechanical parts. Nippon EGalv Steel has supplied electro-galvanized steel to their plant in Indonesia since it started operation in 2013. Nippon EGalv was recognized particularly for its delivery performance, contribution to stable production and cooperation in value creation with the plant.

International Crankshaft Inc. (ICI), NSSMC's crankshaft forging subsidiary in the U.S., received the 2015 Excellence in Value award from American Honda Motor Co. In addition, Huizhou Sumikin Forging Co. in China received the Excellent Quality Award from General Motors in China and SMI Amtek Crankshaft in India received the Quality Excellence Award from General Motors in India respectively in 2015. There are three

categories in Honda Excellence Awards: quality, delivery and value. Twenty-seven suppliers out of 650 Honda suppliers in North America received the Excellence in Value award in 2015. Both Huizhou Sumikin Forging and SMI Amtek Crankshaft received GM's award for a second consecutive year as their stable continuous supply of high-quality product was highly regarded. The NSSMC Group's crankshaft business, based in four countries, namely Japan, the U.S. China, and India, has more than a 10% global share in automobile crankshaft and an annual capacity of 12.3 million crankshafts. Given the outlook for additional demand for new engines, we will respond to automakers' needs such as for forming of crankshafts by even taking into account engine design, while maintaining our proven stable quality and accurate delivery performance.

Both NSSMC and its railway wheel and axle manufacturing subsidiary Standard Steel LLC (SS) received the "Excellent Supplier 2015" award from TTX Company in the U.S. TTX is North America's largest leasing company of railcars and has over 200,000 freight cars for use throughout North America. Excellent Awards are given to suppliers which score 90 or more points of 100 points in items such as quality, cost, delivery, and service. This award was the 10th time for NSSMC's since its first award in 2004, and SS's 25th

Awards from customers in FY2016 (in alphabetical order)

Customer	Award	Product type
American Honda Motor Co., Inc.	Excellence in Value 2015	Crankshafts
General Motors China	Excellent Quality Award	Crankshafts
General Motors India	Quality Excellence Award	Crankshafts
Panasonic Corporation	ECO-VC Gold Award, Special Contribution Award	Steel sheets
Pioneer Electronics AsiaCentre Pte. Ltd.	Best Supplier Award 2016	Steel sheets
TTX Company (U.S.A.)	Excellent Supplier 2015	Railway wheels

consecutive award since the first year TTX made this award. In North America, the recent increase in loading capacity of freight cars has increased the need for high-end wheels for high-load freight cars. NSSMC and SS were quick to develop such wheels and have obtained the Class D attestation, a standard for high load bearing adopted by the Association of American Railroads. Class D wheels are high-end wheels with a long service life and are excellent in terms of load bearing and resistance to wear, compared to the conventional Class C wheels. In particular, NSSMC's Class D wheels have demonstrated outstanding performance in the improvement of service life, and have been highly regarded by customers in North America. At present, NSSMC commands a 100% share in Japan's railway wheel market and an overwhelming technological capacity. We will provide high-quality highperformance railway wheels in the North American market, and marketing efforts will also be extended to other markets having increasing need for wheels of high-load freight cars, such as South America and Australia.

Together with Society

NSSMC grows hand in hand with local communities and society.

Having many manufacturing bases all over Japan, NSSMC has a long history of being engaged in business activities rooted in local communities and supported by local residents. In accordance with our attitude of maintaining harmony with local communities and society, we have implemented distinctive social contribution programs, aiming at growing together with people in local communities. Our programs include promoting environmental preservation and distinctive social contribution activities such as through education, music, sports, and international exchange.

Preservation of the environment For keeping the earth green

"Creation of a Hometown Forest"

NSSMC's "Creation of a Hometown Forest" began in 1971, when we planted saplings at Oita Works. At present, each of NSSMC's steelworks in Japan has its own environmental conservation forest. Our forests, in aggregate, total around 900 hectares (about 2.5 times the area of Central Park in New York) and have become home to a diverse range of birds and small animals. This project seeks to research the natural vegetation inherent to a certain area, carefully select suitable trees, grow their saplings in pots, and have them planted in prepared locations by local residents and our employees working together. Our "Creation of a Hometown Forest" has become the first silvicultural program based on an ecological approach by a Japanese company.

"Creation of a sea forest"

In recent years, a new environmental problem that has been identified is sea desertification, meaning that the sea becomes like a desert owing to disappearance of seaweed from the water. The environment for growth of marine life deteriorates when this happens, causing serious damage to coastal fisheries. It was found that a decline of iron, which has been carried from the forest areas to the sea in river water, is one of the causes for sea desertification. To offset a part of the decline in the supply of iron from nature, NSSMC has created iron supply units composed of humus, soil and steel slag, the latter being a by-product of the steelmaking process that is rich in iron. NSSMC is supplying this product and promoting regeneration of seaweed beds.

Education For children's future

Tatara ironmaking method

We sponsor a hands-on steelmaking program for children using the tatara method (a traditional Japanese ironmaking technique) and activities to present the attraction of manufacturing at various places in Japan.

School visits for lectures and internship programs

For elementary and junior high school students, we help support an energy conservation and environmental preservation class, science experiments, and special classroom lectures by sending our employees as lecturers. We also offer work experience opportunities through internship programs to technical college students and university students.

Corporate sessions for teachers

We host visits to our manufacturing sites by teachers to help deepen their understanding of manufacturing, with the hope that it will trigger interests of children into manufacturing through teachers.

Disaster restoration support As a member of a community or a society

Participation in the restoration projects in the Kaminakajima District, Kamaishi City

Jointly with Kamaishi City and Nippon Steel Kowa Real Estate Co., Ltd., NSSMC is involved in the construction project of Kaminakajima Nursery School, Center for Children and Parents, and Children's Hall. Based on an agreement with the local community, construction began in April 2017 and is to be completed by late December 2017. This is the third phase of the joint restoration project of the Great East Japan Earthquake of 2011 by the three parties in the district, following the first and second phases in the Kaminakajima Restoration Public Housing Project.

While the housing project has been proceeded well, the need for nursery care and arrangements for nursery environments, in accordance with the various working conditions of parents has risen as an urgent issue in Kamaishi City, indicating a new phase of restoration work. In the Kaminakajima District, following completion of the restoration public housing, it has become important to form a new community for people who came to the district, from a perspective of elderly care and community comprehensive care.

The new project will construct Kaminakajima Nursery School, Center for Children and Parents, and Children's Hall in the same site, to create a convenient, comprehensive day-care

Music and sports For lifestyle enrichment

Community activities through music

Through the Nippon Steel & Sumitomo Metal Arts Foundation, NSSMC has a long history of supporting interest in and enjoyment of music, by helping the development of musicians, holding concerts, supporting excellent music-related activities, and making music awards, principally at Kioi Hall in Tokyo.

Community activities through sports

NSSMC also manages or supports sports teams in the local communities of its steelworks. These include the professional J-League Kashima Antlers football team, which began as our corporate team and finished as a runner-up in the 2016 FIFA Club World Cup Finals; a judo club, which has produced Olympic medalists; baseball teams , which have sent many of its players to the professional leagues; and both a men's volleyball team and a rugby team. All of these teams also

environment to deal with the issue and support restoration and employment of mothers raising children.

Moreover, by constructing these facilities, where parents and children from less than one-year old to junior high school children get together, near the housing, the facilities will essentially become a place to form a community on top of functioning as children's facilities.

Salt removal measure on tsunami-devastated farmland

NSSMC donated about 20 tons of converter slag fertilizers, a by-product of steelmaking, to cooperate for research by Tokyo University of Agriculture for salt removal in tsunamidevastated farmland. Deposition of salt occurred at the time of the Great East Japan Earthquake of March 2011 in the Soma area of Fukushima Prefecture. The university applied converter slag fertilizers on strawberry fields and 1.7ha of rice fields and proved its effectiveness in rapid and efficient salt removal. This has thereby been established as the Soma method. Since then, the Soma Project was launched by Tokyo University of Agriculture, Soma City in Fukushima Prefecture, and the agricultural organization JA Soma. The application area was expanded, NSSMC donated about 500 tons of converter slag fertilizers, and approximately 50 ha of rice fields was restored by this method.

Before salt removal

After salt removal

contribute to their local community through such various activities as sports classes for children, coaching of junior teams, and making our athletic facilities available to local residents for games and training. Together with local residents, we strive to provide renewed vigor to our local communities.

*1. On October 1, 2015, NSSMC performed a 1-for-10 share consolidation.

*2. Figures for fiscal 2012 and earlier are for Nippon Steel. Figures in parentheses indicate either negative figures or elimination. "Segment profit (loss)" stated for fiscal 2009 and earlier is "Segment operating profit (loss)." Following the business integration of Nippon Steel City Produce, Inc. and Kowa Real Estate Co., Ltd. on October 1, 2012, the business segment classification has been changed to include the results for "Urban development" in "Elimination of inter-segment transactions" for "Net sales by segment" and "Profit (loss) by segment" from fiscal 2012.

"3. "Crude steel production" of Sumitomo Metals includes those of Sumitomo Metals (Kokura), Ltd. (merged with Sumitomo Metals on January 1, 2012) and of Sumikin Iron & Steel Corporation (present Nippon Steel & Sumikin Koutetsu Wakayama Corporation).

*4. "Steel products shipments," "Average steel selling price," and "Export ratio" of Sumitomo Metals include those of Sumitomo Metals (Kokura), Ltd. (merged with Sumitomo Metals on January 1, 2012), Sumitomo Metals (Naoetsu), Ltd. (merged with Sumitomo Metals on January 1, 2012), and Sumikin Iron & Steel Corporation (present Nippon Steel & Sumikin Koutetsu Wakayama Corporation).

*5. "Export ratio" of NSSMC/Nippon Steel indicates the ratios of exports to total steel sales. "Export ratio" of Sumitomo Metals indicates the ratios of exports to total net sales.
*6. The amounts of "Sales," "Ordinary profit," and "Net income" used to calculate "Return on sales (ROS)" and "Return on equity (ROE)" are the sum of Nippon Steel's amounts for the first half (April 1 to September 30) of fiscal 2012 and NSSMC's amounts for the second half (October 1 to March 31) of fiscal 2012. "Crude steel production" and "Steel products shipments" for fiscal 2012 are the sum of Nippon Steel's amount for the first half, Sumitomo Metals' amount for the first half, and NSSMC's "Average steel selling price" and "Export ratio" are the weighted average of Nippon Steel and Sumitomo Metals.

Notes to Consolidated Financial Statements

Nippon Steel & Sumitomo Metal Corporation and Consolidated Subsidiaries

1. BASIS OF PRESENTING CONSOLIDATED FINANCIAL STATEMENTS

The accompanying consolidated financial statements of Nippon Steel & Sumitomo Metal Corporation (NSSMC) and its subsidiaries (collectively "the NSSMC Group") are prepared on the basis of accounting principles generally accepted in Japan,

2. NOTES TO THE PRESUMPTION OF GOING CONCERN

None

3. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

(1) Scope of consolidation

Number of consolidated subsidiaries: 366 companies For details on the subsidiaries included in consolidation, reference should be made to the list of principal subsidiaries and affiliates of NSSMC on pages 101-102 of this report. In fiscal 2016, the year ended March 31, 2017, the scope of consolidation expanded by 40 companies, including 31 acquired and 6 newly established companies. 13 companies —6 merged companies and 4 liquidations, etc.—were eliminated from the scope of consolidation in fiscal 2016. As part of the above, the acquisition of Nisshin Steel Co., Ltd., on March 13, 2017, added 29 companies to the scope of consolidated subsidiaries.

Non-adoption of the consolidation accounting treatment for the unconsolidated subsidiaries (33 companies) has no material effect on total assets, net sales, profit or retained earnings in the consolidated financial statements.

(2) Application of equity method

Number of affiliates accounted for by the equity method: 113 companies

For details on the affiliates included in consolidation, reference should be made to the list of principal subsidiaries and affiliates of NSSMC on pages 101-102 of this report.

During fiscal 2016, 15 companies were added as equitymethod affiliates and 5 companies were removed as equitymethod affiliates.

As part of the above, the acquisition of Nisshin Steel Co., Ltd., on March 13, 2017, added 14 companies to the scope of equity-method affiliates.

Non-adoption of the equity method for the unconsolidated subsidiaries (33 companies) and affiliates (72 companies) has no material effect on profit or retained earnings in the consolidated financial statements.

(3) Adjustments of differences in fiscal year-end

For consolidated subsidiaries listed below using a fiscal year-

and are compiled from the consolidated financial statements prepared by NSSMC as required by the Financial Instruments and Exchange Act of Japan.

end other than March 31, certain adjustments have been made, if appropriate, in preparing the consolidated financial statements to reflect material transactions that have taken place between their fiscal year-end and March 31.

Consolidated subsidiaries	Date of closing accounting period
1 domestic subsidiary	January 31
3 domestic subsidiaries	December 31
149 foreign subsidiaries	December 31

Principal foreign subsidiaries using a December 31 fiscal year-end:

NIPPON STEEL AND SUMIKIN TUBOS DO BRASIL LTDA. NS-Siam United Steel Co., Ltd.

National Pipe Company Limited

Standard Steel, LLC

NIPPON STEEL & SUMITOMO METAL U.S.A., INC.

PT PELAT TIMAH NUSANTARA TBK.

NIPPON STEEL & SUMITOMO METAL (Thailand) Co., Ltd. NIPPON STEEL & SUMITOMO METAL Australia Pty. Limited NIPPON STEEL & SUMIKIN Steel Processing (Thailand) Co., Ltd.

(4) Securities

- Held-to-maturity debt securities:
 Amortized cost method (straight-line method)
- Available-for-sale securities: Securities with market quotations are stated at market value as of the balance sheet date. (Net unrealized gains or losses are comprehensively included in net assets, and the cost of securities sold is determined by the movingaverage method.)

Securities without market quotations are stated at cost determined by the moving-average method.

(5) Inventories

Inventories are stated principally using the cost accounting method based on the periodic average method. (Regarding balance sheet values, this method is designed to reduce book value when the contribution of inventories to profitability declines.)

(6) Tangible fixed assets (excluding leased assets)

Depreciation of tangible fixed assets is mainly calculated using the declining-balance method. However, depreciation of buildings is mainly calculated using the straight-line method. Furthermore, depreciation of facilities attached to buildings and structures acquired on and after April 1, 2016 is calculated using the straight-line method.

Useful lives of tangible fixed assets are generally as follows: Buildings: Mainly 31 years Machinery: Mainly 14 years

(Changes in Accounting Policies)

Accompanying tax reform, the NSSMC Group has applied "Practical Solution on a Change in Depreciation Method due to Tax Reform 2016" (Practical Issues Task Force [PITF] No. 32, issued June 17, 2016) in its consolidated financial statements from fiscal 2016 and changed its method of depreciation for facilities attached to buildings and structures acquired on and after April 1, 2016 from the declining-balance method to the straight-line method.

The effect of this change in accounting principles on the consolidated financial statements for fiscal 2016 was not material.

(7) Intangible assets (excluding leased assets)

Amortization of intangible assets is calculated using the straight-line method.

Software products for internal use are amortized mainly over the estimated useful life of 5 years.

(8) Leased assets

Assets concerning finance leases in which ownership is transferred to the lessee are depreciated using the same method of depreciation for tangible fixed assets owned by the NSSMC Group.

Assets concerning finance leases in which ownership is not transferred to the lessee are depreciated to a residual value of zero based on the straight-line method over a useful life period corresponding to the lease contract period.

(9) Allowance for doubtful accounts

The allowance for doubtful accounts is computed based on the historical experienced default ratio for non-specific receivables, as well as the estimated irrecoverable portion of specific doubtful receivables calculated on an individual basis.

(10) Provision for loss on construction contracts

The provision for loss on construction contracts is provided based on the excess of estimated costs over contract revenue.

(11) Allowance for retirement benefits of directors and Audit & Supervisory Board members

The allowance for retirement benefits of directors and Audit & Supervisory Board members are computed based on internal rules.

(12) Retirement benefit accounting policy

The employee retirement benefit obligations are computed primarily based on the benefit formula basis using the projected retirement benefit obligations at the end of the consolidated fiscal year under review. Prior service costs are appropriated using the straight-line method over a specified period (mainly 10 years) within the employees' average remaining service period at the time when such costs accrue. Actuarial differences are principally charged to expenses proportionally using the straight-line method from the consolidated fiscal year following the year in which such differences accrue over a specified period (mainly 10 years) within the employees' average remaining service period at the time when such differences accrue.

(13) Accounting for revenues on construction contracts

Regarding projects for which the outcome of the portion completed is deemed certain, the NSSMC Group has applied the percentage-of-completion method (estimating the project progress percentage based on the percentage of the cost incurred to the estimated total cost). The completion-of-contract method is applied to other projects.

(14) Important assets and liabilities in foreign currencies and foreign currency translation

Monetary assets and liabilities of NSSMC and its domestic subsidiaries denominated in foreign currencies are translated into yen at the rate prevailing on the balance sheet date, and the resulting foreign exchange gains or losses are recognized as revenues or expenses. For foreign consolidated subsidiaries, assets and liabilities are translated into yen at the rate prevailing at each balance sheet date, revenue and expense accounts are translated at the average rate of exchange in effect during the fiscal year, and foreign currency translation adjustments are included in foreign currency translation adjustments and noncontrolling interests in consolidated subsidiaries item under net assets.

(15) Hedge accounting

Gains or losses arising from changes in the fair values of derivatives designated as "hedging instruments" are recorded as deferred hedge income (loss) in net assets and included in net profit or loss in the same period in which the gains or losses on the underlying hedged items or transactions are recognized.

In principal, the NSSMC Group adopts the deferred hedging accounting method. In addition, for interest swaps whose amounts, index, and period meet the conditions for hedged items, the "exceptional" method is adopted. Using this method, the NSSMC Group does not account for gains and losses on those interest swaps on a fair value basis, but recognizes swap interest on an accrual basis. For foreign exchange forward contracts and currency swaps whose amounts, currency, and period meet the conditions of hedged items, the "assigning" method is adopted. Using this method, the NSSMC Group does not account for gains and losses on those foreign exchange forward contracts and currency swaps on a fair value basis, but converts hedged items using the rates of those foreign exchange forward contracts and currency swaps at the end of the year.

Derivatives designated as hedging instruments by the NSSMC Group are principally foreign exchange forward contracts, interest swaps, and currency swaps. The related hedged items are trade accounts receivable and payable, foreign currency future transaction, long-term bank loans, and debt securities issued by the NSSMC Group. The NSSMC Group has a policy which aims to utilize these hedging instruments in order to reduce its exposure to the risk of fluctuations in market prices, interest rates, or foreign exchange rates. Therefore, the NSSMC Group's purchase of hedging instruments is limited to the amount of the hedged items.

The NSSMC Group continues to evaluate the effectiveness of its hedging activities by reference to the accumulated gains or losses on the hedging instruments and the related hedged items from the commencement of the hedges.

(16) Goodwill

Goodwill accounted for on an equity basis is amortized over the period for which the excess cost is expected to

contribute to consolidated profit, where it is possible to estimate such a period, using the straight-line method. Otherwise, the excess is amortized proportionately over 5 years.

(17) Cash and cash equivalents

Cash and cash equivalents in the consolidated statements of cash flows include cash in hand, bank deposits able to be withdrawn on demand, and short-term investments due within 3 months of the date of purchase, and which represent an insignificant risk of change in value.

(18) Consumption tax

The accounting treatment used with respect to consumption tax and local consumption taxes is the tax-excluded method.

Changes to presentation (Year ended March 31, 2017) (Consolidated Statements of Operations)

"Exchange loss on foreign currency transactions" which was included in "Other" under "Non-operating loss" for the previous fiscal year is stated independently for the current fiscal year due to its exceeding 10% of the total amount of non-operating loss. Previous fiscal year figures in the consolidated statements of operations have been reclassified to reflect the change to the presentation method.

As a result of this change, the¥40,166 million amount stated as "Other" under "Non-operating loss" in the statement of operations for the previous fiscal year has been reclassified into "Exchange loss on foreign currency transactions" of ¥658 million and "Other" of ¥39,508 million.

(Consolidated Statements of Cash Flows)

Due to the reduced material significance of the category "Payments from changes in ownership interests in subsidiaries that do not result in change in scope of consolidation" (¥(6,202) million in fiscal 2015) in "Cash flows from financing activities," its category is included in "Other" beginning with fiscal 2016. Previous fiscal year figures in the consolidated statements of cash flows have been reclassified to reflect the change to the presentation method.

Additional Information

The NSSMC Group has applied "Implementation Guidance on Recoverability of Deferred Tax Assets" (Accounting Standards Board of Japan [ASBJ] Guidance No. 26, issued March 28, 2016) in its consolidated financial statements from fiscal 2016.

4. JAPANESE YEN AMOUNTS

NSSMC and its domestic subsidiaries maintain their accounting records in yen. Yen amounts included in the accompanying consolidated financial statements are stated in millions of yen, and fractions of less than ¥1 million are

omitted. Therefore, total or subtotal amounts presented in the accompanying consolidated financial statements may not equal the exact sum of the individual balances.

5. INVENTORIES

Items relevant to inventories are as follows:				
			<millic< th=""><th>ons of yen></th></millic<>	ons of yen>

8. REVALUATION OF LAND

Revaluation of land used for business purposes was carried out in accordance with the "Law concerning Revaluation of Land" and related amendments for certain of NSSMC's domestic consolidated subsidiaries and affiliates to which the equity method is applied. Revaluation differences computed by consolidated subsidiaries, net of tax and non-controlling interests, which were charged to "Deferred tax liabilities on revaluation of land" and "Non-controlling interests in consolidated subsidiaries," respectively, were recorded as a separate component of net assets as "Unrealized gains on revaluation of land."

Additionally, revaluation differences accounted for by affiliates were recorded as a separate component of net assets as "Unrealized gains on revaluation of land" in proportion to the equity rate.

Method of revaluation Calculations were made in accordance with the "Law concerning Revaluation of Land."

(Year ended March 31, 2017)

(Revaluation done on March 31, 2002)The excess of the carrying amounts of the revalued land over its fair value on March 31, 2017 was ¥1,577 million.(Revaluation done on March 31, 2001)

The excess of the carrying amounts of the revalued land over its fair value on March 31, 2017 was ¥1,576 million. (Revaluation done on March 31, 2000)

The excess of the carrying amounts of the revalued land over its fair value on March 31, 2017 was ¥1,924 million.

(Year ended March 31, 2016)

(Revaluation done on March 31, 2002)
The excess of the carrying amounts of the revalued land over its fair value on March 31, 2016 was ¥2,309 million.
(Revaluation done on March 31, 2001)
The excess of the carrying amounts of the revalued land over its fair value on March 31, 2016 was ¥11,939 million.
(Revaluation done on March 31, 2000)

The excess of the carrying amounts of the revalued land over its fair value on March 31, 2016 was ¥1,909 million.

9. SELLING, GENERAL AND ADMINISTRATIVE EXPENSES

The main components of selling, general and administrative expenses for the years ended March 31, 2017 and 2016 are as follows:

			<mi< th=""><th>llions of yen></th></mi<>	llions of yen>
		2017		2016
Transportation and storage	¥	109,887	¥	107,280
Salaries		117,248		117,953
Retirement benefit expenses		6,214		5,824
Research and development expenses		53,966		53,912
Depreciation and amortization		6,965		7,033
Amortization of goodwill		6,459		7,063

10. RESEARCH AND DEVELOPMENT COSTS

Research and development costs charged to income for the years ended March 31, 2017 and 2016 are ¥69,110 million and ¥68,493 million, respectively.

11. EXPLANATORY NOTES ON EXTRAORDINARY PROFIT AND LOSS

(Year ended March 31, 2017)

Extraordinary loss

(1) Loss on inactive facilities

Loss on inactive facilities was recorded mainly due to retirement and disassembly of manufacturing facilities based on decision to phase out major production equipment.

(2) Loss on disaster

Loss on disaster was recorded owing to the Oita Works' Fire Accident in its Plate Mill, including expenses for the restoration and retirement of manufacturing facilities, etc.

(3) Restructuring loss

Restructuring loss was recorded due to restructuring of Buttwelding Fittings Business of NIPPON STEEL & SUMIKIN KIKOH COMPANY, LTD., for steelmaking and steel fabrication segment.

(Year ended March 31, 2016)

Extraordinary loss

(1) Impairment loss

Impairment loss associated with property put into business, etc., is accounted for as an extraordinary loss of the chemicals segment and other segments. This categorization is based on recognizing the declining profitability in the deteriorating business conditions as impairment losses mainly associated with property of a consolidated subsidiary put into the coal tar chemicals business in China.

The grouping method, in principle, is to use each steelworks as a group while also recognizing individual units that generate independent cash flow. Recoverable amounts are calculated based on the net sale amount for properties held for lease and the estimate of the use value for business-use properties, with future cash flow calculated by applying a discount rate of 8.0% to the present value.

The amount of impairment loss for buildings and structures is ¥1,026 million, ¥1,030 million for machinery, equipment and vehicles, ¥47 million for tools, furniture and fixtures, ¥302 million for land, and ¥11,306 million for construction in progress.

(2) Loss on inactive facilities

Loss on inactive facilities was recorded mainly due to retirement and disassembly of manufacturing facilities based on decision to phase out major production equipment.

12. NOTES ON CONSOLIDATED STATEMENTS OF COMPREHENSIVE INCOME

(2) Operating leases(non-cancelable)

The amount of outstanding future lease payments due at March 31, 2017 and 2016 are summarized as follows:

Future lease payments:
Within one year
Over one year

The amount of outstanding future lease income due at March 31, 20

Future lease income:	
Within one year	
Over one year	

16. FINANCIAL INSTRUMENTS

Current status of financial instruments Policy regarding financial instruments

NSSMC considers its business plan as it undertakes the procurement of necessary funds (mainly through the arrangement of loans and the issuance of commercial paper and bonds), and its fund procurement methods are chosen based on consideration of the short- or long-term nature of funding requirements and other special characteristics of funding requirements. Surplus fund management is restricted to management methods that emphasize safety and capabilities for conversion into cash when necessary. In addition, in cases when NSSMC undertakes transactions in derivatives,

Finance lease contracts other than those under which the ownership of the leased assets are to be transferred to lessees

, 2017 and 2010 are s	unninanze	u as 10110115.		
			<mill< td=""><td>ions of yen></td></mill<>	ions of yen>
		2017		2016
	¥	4,749	¥	4,257
		8,560		9,250
	¥	13,310	¥	13,507
017 and 2016 are sum	marized a	is follows:		

		<	Millions of yen>
	2017		2016
¥	1,010	¥	1,058
	8,321		5,146
¥	9,331	¥	6,205

such transactions are limited to transactions (including future transactions) undertaken as a part of business activities (for the purpose of hedging risks associated with hedged items actually executed in the course of NSSMC's business activities). NSSMC has a policy of not engaging in derivative transactions for trading purposes (transactions with the purpose of obtaining profit through the trading of derivatives themselves).

(2) Types of financial instruments and related risks

NSSMC is exposed to credit risks arising from trade receivables such as notes and accounts receivable, but limits its transactions to principal suppliers with respect to which it can offset receivables against trade payables and loans and to companies with high credit ratings. NSSMC, therefore, judges that it is exposed to almost no contractual default credit risks. In addition, accompanying NSSMC's exports of products, NSSMC is exposed to foreign currency exchange risks associated with receivables denominated in foreign currencies. NSSMC holds marketable and investment securities, mainly stocks of customers and other business collaborators, and is exposed to market price risks owing to these stockholdings. In addition, NSSMC extends long-term loans payable to its affiliates. NSSMC incurs trade payables such as notes and accounts payable that are, in principle, payable within one year. NSSMC is exposed to foreign currency exchange risks arising from a portion of trade payables associated with imports of raw materials that are denominated in foreign currencies. NSSMC's fund procurement is as described in (1) above. In addition, a portion of funds procured by means of long-term loans and bonds is associated with variable interest rates, and the related payment burden changes due to trends in market interest rates. Regarding derivative transactions associated with marketable securities, interest rates, or currency exchange rates, NSSMC limits its execution of such transactions to (a) hedge transactions with the objective of avoiding value fluctuation risks on marketable securities that NSSMC holds, (b) hedge transactions with the objective of hedging market risks accompanying movements in interest rates associated with assets/liabilities or with the objective of maintaining the proportion of assets/liabilities associated with fixed or variable interest rates, and (c) hedge transactions with the objective of avoiding currency exchange risks accompanying transactions undertaken as a part of business activities such as trading, funding, and investment. The derivative transactions executed by NSSMC are exposed to the risks of securities price fluctuation, future changes in interest rates and currency exchange rates, but because those transactions are limited to those with the objectives described in (a), (b), and (c) above, NSSMC judges that the risks from those transactions are limited.

(3) Systems for management of financial instrument risks(a) Management of credit risks (the risks that customers may default on their obligations)

In accordance with NSSMC's credit management regulations, information related to the credit management situation of customers is shared, and asset preservation measures are considered and implemented when necessary.

(b)Management of market risks (the risks arising from fluctuations in exchange rates, interest rates, and other indicators)

- 1)Market price risks
- Regarding marketable and investment securities, NSSMC

maintains a grasp of fair value situations when necessary and undertakes deliberations regarding whether such securities are necessary for business purposes.

2)Interest rate risks

To control risks from interest rate changes associated with interest payments on loans and bonds, interest rate swaps are used.

3)Currency exchange risks

Regarding foreign currency-denominated trade assets and liabilities, to avoid currency exchange risks accompanying transactions undertaken as a part of business activities such as trading, funding, and investment, exchange contracts and currency swaps are used to hedge such risks.

In addition, derivative transactions are executed in accordance with internal derivative transaction management regulations. These regulations require that prospective transactions in financial instrument-related derivatives be discussed by the Funding Management Committee with respect to the transaction policy, then discussed by or reported to the Management Conference/ Board of Directors, and finally approved individually by the General Manager of the Accounting & Finance Division within the pre-authorized scope of transactions before being executed. In conjunction with this, reports on the balance and profitability situation of such transactions must be regularly submitted to the Funding Management Committee. In addition, during each six-month semiannual fiscal period, an evaluation is undertaken of the effectiveness of hedging activities.

(c) Management of fund procurement liquidity-related risks (the risks that NSSMC may not be able to meet its payment obligations on the scheduled date)

Based on reports from each of NSSMC's departments, the Accounting & Finance Division prepares and updates cash flow plans when necessary to manage liquidity-related risks. To prepare for unexpected events, NSSMC arranges commitment line contracts.

The systems of consolidated subsidiaries are generally the same as those of NSSMC that are described in items (1) through (3) above.

(4) Supplementary explanation of the fair value of financial instruments and related matters

The contract (notional) amount of derivative transactions in Note 18, "Information on Derivatives" is not an indicator of the actual risks involved in derivative transactions.

2. Fair value and other matters related to financial instruments

Book value and fair value as of the balance sheet date and differences are shown in the following tables.

(Year ended March 31, 2017)

(ear ended March 31, 2017)			<millions of="" yen=""></millions>

	(1,209,116)		(1,249,156)		(40,039)
	(5,490)		(5,490)		_

have fair values that are virtually the same as the book values, the latter has been used.

(8) Bonds and notes and (9) Long-term loans payable

The fair value of bonds is valued at the market price. In addition, the fair value of long-term loans payable is calculated by discounting total principal and interest payments to present value using a discount rate equal to the rate that would be charged if the loan was newly borrowed. Floating rate bonds and loans are subject to exceptional method for interest rate swaps. Such interest rate swaps are handled together with total principal and interest payments and are calculated as the present value using a reasonable estimate of the discount rate that would be applied for the same kind of bonds or loans.

Derivative transactions

These transactions are handled as described in Note 18, "Information on Derivatives."

Notice 2: Items for which obtaining fair value is deemed to be extremely difficult

(Year ended March 31, 2017)

Since interest rate swaps subject to the exceptional method are handled together with long-term loans payable that are subject to hedging, their fair value is presented within the fair value of such bonds and long-term loans payable. In addition, foreign exchange forward contracts which are treated by the assigning method are handled together with accounts receivable and accounts payable. Therefore, their fair value is included within the fair value of accounts receivable and accounts payable. Since currency swaps subject to the assigning method are handled together with long-term loans payable, their fair value is presented within the fair value of such long-term loans payable.

(1) Summary of adopted retirement benefits

The NSSMC Group operates three defined benefit retirement plans which consist of a defined benefits enterprise pension plan, a defined contribution plan, and a lump-sum retirement payment plan. The NSSMC Group may pay special retirement allowances on voluntary retirement, which are not included in the defined benefit obligations. Parts of the defined benefits enterprise pension plan are instituted to retirement benefit trusts. For the lump-sum retirement payment plan (although it is an unfunded retirement plan, some of it is a funded retirement plan as a result of institution to retirement benefit trusts), a lump-sum based on salaries and years of service are paid. Defined benefits enterprise pension plans and lump-sum retirement payment plans for certain consolidated subsidiaries are determined by the simplified method.

(2) Defined benefit plan

Remeasurements of defined benefit plans (before adjustments in deferred tax accounting) are as follows:

			<n 2017</n 		
		2017		2016	
Prior service costs	¥	784	¥	(222)	
Actuarial differences		(29,328)		53,435	
Total	¥	(28,544)	¥	53,212	

(g) Remeasurements of defined benefit plans (accumulated)

Remeasurements of defined benefit plans (accumulated, before adjustments in deferred tax accounting) are as follows:

			Aillions of yen>	
		2017		2016
Unrecognized prior service costs	¥	(9,457)	¥	(10,242)
Unrecognized actuarial differences		(93,160)		(63,831)
Total	¥	(102,618)	¥	(74,074)

(h) Plan assets 1) Categories of plan assets The major categories of plan assets are as follows:

	2017	2016
Debt securities	35%	38 %
Equity securities	44	42
Cash and bank deposits	9	8
Other	12	12
Total	100 %	100 %

March 31, 2017 and 25% for the year ended March 31, 2016.

2) Method of determining expected long-term rate of return on plan assets In order to determine the expected long-term rate of return on plan assets, the NSSMC Group considers previous and expected distributions of plan assets, and the present and long-term future expected rates of the Group's wide variety of plan assets.

(i) Principal assumptions used in actuarial valuations Principal assumptions used in actuarial valuations are as follows:

Discount rate

Expected long-term rate of return on plan assets

(3) Defined contribution plan

The estimated amount of contribution to the defined contribution plan was ¥4,864 million for the year ended March 31, 2017 and ¥4,567 million for the year ended March 31, 2016.

2017	2016
Mainly 0.7%	Mainly 0.7%
Mainly 2.0%	Mainly 2.0%

20. DEFERRED TAX ACCOUNTING

) Components of deferred tax assets and liabilities at March 31, 2017 and 2016			<millio< th=""><th>ons of yen:</th></millio<>	ons of yen:
		2017		201
Deferred tax assets:				
Reserve for accrued bonuses	¥	25,273	¥	22,554

Total		210,786		202,52
Deferred tax liabilities:				
Special tax purpose reserve		(76,897)		(65,343
Unrealized gains on available-for-sale securities		(110,105)		(71,670
Net unrealized gains on assets and liabilities of consolidated subsidiaries		(8,112)		(364
Total		(195,116)		(137,378
Net deferred tax assets	¥	15,669	¥	65,14

(2) Reconciliation of the differences between the statutory tax rate and the actual tax rate

Years ended March 31	2017	2016*
Statutory tax rate	30.9%	_
Permanent non-deductible expenses	1.1	_
Permanent non-taxable income	(1.0)	_
Effect of foreign tax rate differences	(1.5)	_
Valuation allowance	(9.0)	_
Other	(0.9)	_
Actual tax rate	19.6%	_

*Since the difference between the statutory tax rate and the actual tax rate is not significant (less than 5% of the statutory tax rate), no reconciliation of these two rates is presented.

(3) Adjustment of deferred tax assets and liabilities for enacted changes in tax laws and rates

Year ended March 31, 2016

In accordance with the establishment in the national assembly on March 29, 2016, of the "Act on Partial Revision of the Income Tax Act" and the "Act on Partial Revision of the Local Tax Act," the effective statutory tax rate of 32.3% utilized in the previous consolidated fiscal year for the computation of deferred tax assets and deferred tax liabilities for the current consolidated fiscal year (applied only to assets and liabilities to be recovered or settled on or after April 1, 2016) has been revised from 32.3% utilized

in the previous consolidated fiscal year to 30.9% for assets and liabilities to be recovered or settled during the period of April 1, 2016 to March 31, 2018, and to 30.6% for assets and liabilities to be recovered or settled from April 1, 2018 and thereafter.

The revisions had the effect of increasing deferred tax assets (the amount remaining after deducting the amount of deferred tax liabilities) by ¥194 million, income taxesdeferred reported in the current consolidated fiscal year by ¥4,985 million, unrealized gains on available-for-sale securities by ¥4,217 million, and remeasurements of defined benefit plans by ¥1,222 million.

21. INFORMATION CONCERNING THE BUSINESS COMBINATION

(Year ended March 31, 2017)

1. Outline of the Business Combination			
(1) Name and Business of the Acquired Co	ompany		
Acquired company name	Nisshin Steel Co., Ltd.		
Business of the acquired company	Steelmaking and steel		

(2) Objectives of the Business Combination

NSSMC and Nisshin Steel Co., Ltd. aim to bring together the respective management resources that they have fostered to date and create synergies, and thereby enhance competitiveness, and to strengthen the position of the NSSMC Group as the "Best Steelmaker with World-Leading Capabilities" with the addition of Nisshin Steel Co., Ltd., and to thereby enhance sustainable growth and corporate value in the mid- to long-term and contribute to the creation and development of a more prosperous society.

(3) Date of the Business Combination March 13, 2017

(4) Legal Method of the Business Combination Share acquisition with cash as consideration.

(5) Name of the Company after the Business Combination No changes are made to the name of the company after the business combination.

(6) Acquired Ratio of Voting

Ratio of voting rights owned before the business combination: 8% Ratio of voting rights additionally acquired on the date of the business combination: 43% Ratio of voting rights after acquisition: 51%

(7) Primary Reasons for Determining the Acquiring Company NSSMC acquired 51% of voting rights of the acquired company through share acquisition with cash as consideration.

2. Period of the Business Performance of the Acquired Company included in the Consolidated Statement of Operations Regarding the Consolidated Fiscal Year

As the deemed acquisition date assumed to be the end of consolidated fiscal year, only the balance sheet of the acquired company was consolidated, and the consolidated statement of operations does not include the business performance of the acquired company.

3. The Acquisition Cost of the Acquired Company and its Break

Fair value on the date of the business combination of the acquired the business combination

Cash paid for additional acquisition

Total Acquisition Cost

4. Difference between Acquisition Cost for Acquired Company and Total Acquisition Cost for Each Transaction Leading to Acquisition

Gain on step acquisitions: ¥10,027 million

el fabrication

kdown by the Type of Consideration	
d company's shares held before	¥14,781 million
	¥75,972 million
	¥90,753 million

5. Details and Amounts of Major Acquisition-Related Expenses

Advisory fees, etc.: ¥627 million

6. Amount, Cause and Amortization Method and Period of Goodwill Generated

(1) The amount of goodwill is ¥1,696 million.

(2) The cause is the acquisition cost exceeded the fair value of the net assets acquired on date of the business combination.

(3) The amortization method and period will be the straight-line method over a period of 5 years.

7. Amounts of Assets Acquired and Liabilities Assumed on the Date of the Business Combination and Breakdown by Major Items

Current assets	¥250,595 million
Fixed assets	¥419,026 million
Total assets	¥669,622 million
Current liabilities	¥224,318 million
Long-term liabilities	¥256,754 million
Total liabilities	¥481,073 million

8. Estimated Effect on the Consolidated Statement of Operations if the Business Combination had been completed at the Beginning of the Fiscal Year

Net sales	¥525,563 million
Ordinary profit	¥5,998 million
Profit before income taxes	¥5,051 million

(Method of the estimation)

These figures are estimated based on the consolidated statement of operations of the acquired company from April 1, 2016 to March 31, 2017 and have not been audited.

22. SEGMENT INFORMATION

(1) Segment information

(a) General information about reportable segments

NSSMC is a company engaged in the steelmaking and steel fabrication business, and acts as the holding company for its business segment companies, which are engaged in the engineering and construction, chemicals, new materials, and system solutions businesses. Each business segment company shares the management strategy of the NSSMC Group, while conducting its business activities independently from and in parallel with other Group members. These five business segments are reportable segments.

Reportable segments	
Steelmaking and steel fabrication	Manufacturing and marketing of ste
Engineering and construction	Manufacturing and marketing of ind mance of construction work under or gas, and heat
Chemicals	Manufacturing and marketing of coa materials
New materials	Manufacturing and marketing of ma composite products, and products
System solutions	Computer systems engineering and

(b) Basis of measurement about segment sales, profit, assets, liabilities, and other items

The accounting methods for the reportable segments are generally the same as those which are set forth in Note 3, "Summary of Significant Accounting Policies." Figures for profit of reportable segments are on an ordinary profit basis, and liabilities are the balance of interest-bearing debt. Please note that inter-segment sales are based on prices employed in transactions with third parties.

(c) Information about segment sales, profit, assets, liabilities and other items (Year ended March 31, 2017)

								-
	Reportable segment				_

24. EARNINGS PER SHARE AND NET ASSETS PER SHARE

Reconciliation of the differences between basic and diluted earnings per share ("EPS") and net assets per share ("BPS") for the years ended March 31, 2017 and 2016 are as follows:

(Year ended March 31, 2017)

	Millions of yen	Thousands of shares	Yen
	Profit attributable to owners of parent	Weighted average number of shares	EPS
Basic EPS			
Profit attributable to owners of parent available to common shareholders	¥ 130,946	884,959	¥ 147.96
	Net assets	Number of shares at fiscal year-end used in calculating net assets per share	BPS
Basic BPS			
Net assets at fiscal year-end available to common shareholders	¥ 2,948,232	882,647	¥ 3,340.21

(Year ended March 31, 2016)

	Millions of yen	Thousands of shares	Yen
	Profit attributable to owners of parent	Weighted average number of shares	EPS
Basic EPS			
Profit attributable to owners of parent available to common shareholders	¥ 145,419	916,209	¥ 158.71
	Net assets	Number of shares at fiscal year-end used in calculating net assets per share	BPS
Basic BPS			
Net assets at fiscal year-end available to common shareholders	¥ 2,773,822	902,266	¥ 3,074.28

Regarding diluted earnings per share, no figures for diluted earnings per share have been disclosed because no latent shares existed. NSSMC carried out the share consolidation at the ratio of 10 shares to 1 share effective October 1, 2015. In accordance with this, earnings per share is calculated based on the assumption that the share consolidation had been carried out at the beginning of fiscal 2015.

In addition, at March 31, 2017, out of the above secured liabilities, ¥1,261 million of shares of affiliates are pledged as collateral against the loans of those affiliates.

And, at March 31, 2016, out of the above secured liabilities, ¥1,261 million of shares of affiliates are pledged as collateral against the loans of those affiliates.

Independent Auditor's Report

Independent Auditor's Report

To the Shareholders and Board of Directors of Nippon Steel & Sumitomo Metal Corporation

We have audited the accompanying consolidated financial statements of Nippon Steel & Sumitomo Metal Corporation and its consolidated subsidiaries, which comprise the consolidated balance sheets as at March 31, 2017 and 2016, and the consolidated statements of operations, statements of comprehensive income, statements of changes in net assets and statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information expressed in Japanese yen.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in Japan, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in Japan. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on our judgement, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, while the objective of the financial statement audit is not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Nippon Steel & Sumitomo Metal Corporation and its consolidated subsidiaries as at March 31, 2017 and 2016, and their financial performance and cash flows for the years then ended in accordance with accounting principles generally accepted in Japan.
