Hydrogen Environments

NIPPON STEEL Stainless Steel Pipe Co., Ltd.

HYDREXELTM New Specialty Material for High-pressure Gaseous Hydrogen Environments P106en_03_202503f © 2019, 2025 NIPPON STEEL CORPORATION

New Specialty Material for High-pressure

HYDREXEL

Stainless steel for high-pressure hydrogen "HYDREXELTM" will make innovation to the hydrogen-based society.

To supply energy to fuel cell vehicles (FCV), which use hydrogen as the next-generation clean energy, hydrogen stations are being established in the world. NIPPON STEEL has developed "HYDREXELTM", unique stainless steel with excellent hydrogen embrittlement resistance and high strength for use in high pressure hydrogen environment. Its features of high strength and welding application availability can be applied most of parts and pipes. HYDREXELTM, the most suitable material for high-pressure hydrogen environments, makes hydrogen-based society and contributes to zero emission of CO₂.

Notice: While every effort has been made to ensure the accuracy of the information contained within this publication, the use of the information is at the reader's risk and no warranty is implied or expressed by NIPPON STEEL CORPORATION with respect to the use of the information contained herein. The information in this publication is subject to change or modification without notice. Please contact the NIPPON STEEL CORPORATION office for the latest information.

Please refrain from unauthorized reproduction or copying of the contents of this publication. The names of our products and services shown in this publication are trademarks or registered trademarks of NIPPON STEEL CORPORATION, affiliated companies, or third parties granting rights to NIPPON STEEL CORPORATION or affiliated companies. Other product or service names shown may be trademarks or registered trademarks of their respective owners. NIPPON STEEL has utilized its advanced technology to produce high-functionality stainless steel in order to supply high-pressure hydrogen to fuel cell vehicles (FCV). The color logo uses the beautiful colors of stainless steel (silver gray), a sign of hydrogen and confidence (blue) and thought to the environment at the top right of the "X" (turquoise green).

The colored logo gives the feel of solidity, with shading to show light coming from the left top. The "HYD" of Hydrogen, "RE" of Revolution, followed by "X" indicate the potential of the coming hydrogen-based society, and the turquoise green suggests the environmental benefits.

HYDREXELTM uses different brand names for the domestic trademark (HRX19®) and overseas trademark.

Hydrogen embrittlement resistance

HYDREXELTM has excellent hydrogen embrittlement resistance even under high pressurized hydrogen gas at low temperature by optimization of chemical compositions.

- Highest hydrogen embrittlement resistance in austenitic stainless steels
- Ni equivalent(*)≧32.09%
- Long term usage under high pressurized hydrogen gas environment
- Free from hydrogen gas leakage and safety improvement of equipment *Ni equivalent (%) = Ni+0.65Cr+0.98Mo+1.05Mn+0.35Si+12.6C

HYDREXELTM Conventional steel

No hydrogen embrittlement Hydrogen embrittlemen

Hydrogen embrittlement resistance

reliable

High-strength small & thin

Weldablity safety & cost saving

High-strength

HYDREXELTM can achieve about 1.5 times higher strength than Type 316 HYDREXELTM can prevent the leakage of hydrogen gas (L) . Application of HYDREXELTM to substitute for Type 316(L) will contribute to increase flow rate of hydrogen gas and decrease filling duration of hydrogen gas by decreasing wall thickness of pipe and expanding inner diameter of pipe.

In addition, it is possible to decrease fabrication cost due to reduce total material weight.

- TS≧800MPa
- About 1.5 times higher strength than Type 316(L)
- Decrease of fabrication cost by weight reduction and filling hydrogen gas with higher flow rate

Type 316(L) HYDREXELTM

Weldablity

from fitting portion by applying welding fabrication even high pressurized hydrogen gas environment.

- Similar strength and hydrogen embrittlement resistance of weld to base material.
- Elimination of mechanical fitting by application of welding fabrication
- Reduction of fabrication cost and maintenance cost
- Improved safety against leakage of hydrogen gas

Chemical Composition

HYDREXELTM has the optimized chemical composition within the range of XM-19 in ASME/ASTM standards (22%Cr-13%Ni-5%Mn-2%Mo-Nb, V) to improve strength and hydrogen embrittlement resistance.

Chemical Composition (mass %)

Component Range	С	Si	Mn	Р	S	Ni	Cr	Мо	V	Nb	Ν

Hydrogen embrittlement resistance

Hydrogen embrittlement resistance is described by Ni equivalent. HYDREXELTM has excellent hydrogen embrittlement resistance compared with conventional austenitic stainless steels such as Type 316(L) by higher Ni equivalent than 32.09%.

Temperature (°C)

Excellent hydrogen embrittlement resistance even under high pressurized hydrogen gas at lower temperature Reliability for long term operation
